

AWC300SZ - 30 Bottle Single Zone Built-In Wine Cooler

The Avallon AWC300SZ built-in wine cooler combines luxury and style to create a superior storage environment for your treasured wine collection. A top performing unit in the market, the AWC300SZ utilizes air cooling technology, which allows for even air dispersion and precise temperature control within the unit, differentiating it from other units that use outdated cold plates. Its 15" wide cabinet accommodates 30 standard Bordeaux size bottles, and a temperature range of 40°F to 65°F allows you to choose whether you want to store your red or white wines at their optimal storage temperatures. State-of-the-art Argon filled double paned glass filters harmful UV rays away from your collection; acts as a thermal barrier, reflecting unwanted heat and making the unit more energy efficient; and the clear glass displays your bottles clearly. A solid, seamless stainless steel door gives this wine cooler the finished look that makes it perfect to build in under your counter or use in a free standing application. The matching stainless steel front vent and solid handlebar offer perfect modern and sleek finishing touches. The upscale internal finishes of this unit give you the full luxurious experience. Touch panel digital controls and rolling stainless steel fronted wood shelves provide a high-end look while also providing superb and easy-to-use functionality. The included carbon filter blocks unwanted odors, and a blue LED light internal light adds to the overall deluxe look and feel of the wine cooler. An upgraded compressor and anti-vibration gasket leave your wine undisturbed and make for proper aging of your wine collection. Finally, rest assured that your wine collection will be safe with the included security lock.

FEATURES AND BENEFITS

- Fan forced air dispersion for powerful, even cooling
- Argon filled dual paned glass
