Record Model/Serial Numbers

Please read and save these instructions

This Use & Care Guide provides specific operating instructions for your model. Use your refrigerator only as instructed in this Use & Care Guide. These instructions are not meant to cover every possible condition and situation that may occur. Common sense and caution must be practiced when installing, operating and maintaining any appliance.

Please record your model and serial numbers below for future reference. This information is found on the serial plate located inside the refrigerator compartment.

Model Number: 253

Serial Number: _____

Purchase Date: _____

IMPORTANT
Use only soap and water to clean serial plate.

Important Safety Instructions

Safety Precautions

Do not attempt to install or operate your unit until you have read the safety precautions in this manual. Safety items throughout this manual are labeled with a Danger, Warning, or Caution based on the risk type.

Definitions

 This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

 **DANGER**
DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

 **WARNING**
WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

 **CAUTION**
CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

IMPORTANT
Indicates installation, operation, or maintenance information which is important but not hazard-related.

Important Safety Instructions

WARNING

Please read all safety instructions before using your new refrigerator.

For Your Safety

Do not store or use gasoline, or other flammable liquids in the vicinity of this or any other appliance. Read product labels for warnings regarding flammability and other hazards.

- Do not operate the refrigerator in the presence of explosive fumes.
- Avoid contact with any moving parts of automatic ice maker.
- Remove all staples from the carton. Staples can cause severe cuts, and also destroy finishes if they come in contact with other appliances or furniture.

Child Safety

Destroy or recycle the carton, plastic bags, and any exterior wrapping material immediately after the refrigerator is unpacked. Children should **NEVER** use these items to play. Cartons covered with rugs, bedspreads, plastic sheets or stretch wrap may become airtight chambers, and can quickly cause suffocation.

Proper disposal of your refrigerator or freezer

Risk of child entrapment

Child entrapment and suffocation are not problems of the past. Junked or abandoned refrigerators or freezers are still dangerous – even if they will sit for “just a few days.” If you are getting rid of your old refrigerator or freezer, please follow the instructions below to help prevent accidents.

Before you throw away your old refrigerator/ freezer:

- Remove doors.
- Leave shelves in place so children may not easily climb inside.
- Have refrigerant removed by a qualified service technician.

Important Safety Instructions

WARNING

These guidelines must be followed to ensure that safety mechanisms in this refrigerator will operate properly.

Electrical information

- **The refrigerator must be plugged into its own dedicated 115 Volt, 60 Hz., AC only electric outlet.** The power cord of the appliance is equipped with a three-prong grounding plug for your protection against electrical shock hazards. It must be plugged directly into a properly grounded three-prong receptacle. The receptacle must be installed in accordance with local codes and ordinances. Consult a qualified electrician. **Do not use an extension cord or adapter plug.**
- Immediately repair or replace any power cord that becomes frayed or damaged.
- Never unplug the refrigerator by pulling on the power cord. Always grip the plug firmly, and pull straight out from the receptacle to prevent damaging the power cord.
- Unplug the refrigerator before cleaning and before replacing a light bulb to avoid electrical shock.
- Performance may be affected if the voltage varies by 10% or more. Operating the refrigerator with insufficient power can damage the compressor. Such damage is not covered under your warranty.
- Do not plug the unit into an outlet controlled by a wall switch or pull cord to prevent the refrigerator from being turned off accidentally.
- Avoid connecting refrigerator to a Ground Fault Interruptor (GFI) circuit.

Warranty Information

KENMORE APPLIANCE WARRANTY

One Year Limited Warranty

When installed, operated and maintained according to all instructions supplied with the product, if this appliance fails due to a defect in material or workmanship within one year from the date of purchase, call 1-800-4-MY-HOME® to arrange for free repair.

If this appliance is used for other than private family purposes, this warranty applies for only 90 days from the date of purchase.

This warranty covers only defects in material and workmanship. Sears will NOT pay for:

1. Expendable items that can wear out from normal use, including but not limited to filters, belts, light bulbs and bags.
2. A service technician to instruct the user in correct product installation, operation or maintenance.
3. A service technician to clean or maintain this product.
4. Damage to or failure of this product if it is not installed, operated or maintained according to all instructions supplied with the product.
5. Damage to or failure of this product resulting from accident, abuse, misuse or use for other than its intended purpose.
6. Damage to or failure of this product caused by the use of detergents, cleaners, chemicals or utensils other than those recommended in all instructions supplied with the product.
7. Damage to or failure of parts or systems resulting from unauthorized modifications made to this product.

Disclaimer of implied warranties; limitation of remedies

Customer's sole and exclusive remedy under this limited warranty shall be product repair as provided herein. Implied warranties, including warranties of merchantability or fitness for a particular purpose, are limited to one year or the shortest period allowed by law. Sears shall not be liable for incidental or consequential damages. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages, or limitations on the duration of implied warranties of merchantability or fitness, so these exclusions or limitations may not apply to you.

This warranty applies only while this appliance is used in the United States and Canada.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Sears Brands Management Corporation, Hoffman Estates, IL 60179

Sears Canada Inc., Toronto, Ontario, Canada M5B 2B8

Master Protection Agreements

Congratulations on making a smart purchase. Your new Kenmore® product is designed and manufactured for years of dependable operation. But like all products, it may require preventive maintenance or repair from time to time. That's when having a Master Protection Agreement can save you money and aggravation. The Master Protection Agreement also helps extend the life of your new product. Here's what the Agreement* includes:

- **Parts and labor** needed to help keep products operating properly **under normal use**, not just defects. Our coverage goes **well beyond the product warranty**. No deductibles, no functional failure excluded from coverage – **real protection**.
- **Expert service** by a force of more than **10,000 authorized Sears service technicians**, which means someone you can trust will be working on your product.
- **Unlimited service calls and nationwide service**, as often as you want us, whenever you want us.
- **“No-lemon” guarantee** – replacement of your covered product if four or more product failures occur within twelve months.
- **Product replacement** if your covered product can not be fixed.
- **Annual Preventive Maintenance Check** at your request – no extra charge.
- **Fast help by phone** – we call it **Rapid Resolution** – phone support from a Sears representative on all products. Think of us as a “talking owner’s manual”.
- **Power surge protection** against electrical damage due to power fluctuations.
- **\$250 Food Loss Protection** annually for any food spoilage that is the result of mechanical failure of any covered refrigerator or freezer.
- **Rental reimbursement** if repair of your covered product takes longer than promised.
- **10% discount** off the regular price of any non-covered repair service and related installed parts.

Once you purchase the Agreement, a simple phone call is all that it takes for you to schedule service. You can call anytime day or night, or schedule a service appointment online.

The Master Protection Agreement is a risk free purchase. If you cancel for any reason during the product warranty period, we will provide a full refund. Or, a prorated refund anytime after the product warranty period expires. Purchase your Master Protection Agreement today!

Some limitations and exclusions apply. For prices and additional information in the U.S.A. call 1-800-827-6655.

* Coverage in Canada varies on some items. For full details call Sears Canada at 1-800-361-6665.
Sears Installation Service

For Sears professional installation of home appliances, garage door openers, water heaters, and other major home items, in the U.S.A. or Canada call 1-800-4-MY-HOME®.

Installation

This Use & Care Manual provides specific operating instructions for your model. Use the refrigerator only as instructed in this Use & Care Manual. **Before starting the refrigerator, follow these important first steps.**

Location

- Choose a place that is near a grounded electrical outlet. Do Not use an extension cord or an adapter plug.
- If possible, place the refrigerator out of direct sunlight and away from the range, dishwasher or other heat sources.
- The refrigerator must be installed on a floor that is level and strong enough to support a fully loaded refrigerator.
- Consider water supply availability for models equipped with an automatic icemaker.

CAUTION

DO NOT install the refrigerator where the temperature will drop below 55°F (13°C) or rise above 110°F (43°C). The compressor will not be able to maintain proper temperatures inside the refrigerator.

DO NOT block the toe grille on the lower front of your refrigerator. Sufficient air circulation is essential for the proper operation of your refrigerator.

IMPORTANT

If you install your refrigerator in a garage or other unheated area, you may experience freezer temperature problems during the winter months when temperatures dip below 55° F.

Upgrading your refrigerator with a Garage Kit will lower the minimum operating temperature of your unit to 34° F. This kit can be ordered through Sears stores or Sears Parts & Repair at an additional cost.

Installation Clearances

- Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:

Sides & Top	3/8"
Back	1"

NOTE

If you see black coils/tubing on the back of your refrigerator (air-cooled condenser) leave 3" clearance at top of refrigerator.

Door Opening

Your refrigerator should be positioned to allow easy access to a counter when removing food. To make this possible, the direction in which the doors open can be reversed. See Door Removal & Reversal Instructions.

NOTE

If your refrigerator is placed with the door hinge side against a wall, you may have to allow additional space so the door can be opened wider.

Leveling

All four corners of your refrigerator must rest firmly on a solid floor. Your refrigerator is equipped with adjustable front rollers or front leveling screws to help level your unit.

To Level Your Refrigerator:

1. Remove toe grille.
2. Use flat-blade screwdriver or 3/8" socket wrench to adjust front rollers. Use adjustable wrench to adjust leveling screws.

NOTE

Raise the front of the refrigerator enough so the doors close freely when opened halfway. The refrigerator should slope 1/4" to 1/2" from front to back. Then level the refrigerator from side to side.

Adjustable Front Roller
(some models)

Stationary Front Roller
with Leveling Screw
(some models)

Connecting Household Water Supply To Refrigerator

WARNING

To avoid electric shock, which can cause death or severe personal injury, disconnect the refrigerator from electrical power before connecting a water supply line to the refrigerator.

CAUTION

To Avoid Property Damage:

- Copper tubing is recommended for the water supply line. Water supply tubing made of 1/4" plastic is not recommended since it greatly increases the potential for water leaks. Manufacturer will not be responsible for any damage if plastic tubing is used for supply line.
- DO NOT install water supply tubing in areas where temperatures fall below freezing.
- Chemicals from a malfunctioning softener can damage the icemaker. If the icemaker is connected to soft water, ensure that the softener is maintained and working properly.

IMPORTANT

Ensure that your water supply line connections comply with all local plumbing codes.

Before Installing The Water Supply Line, You Will Need

- **Basic Tools:** adjustable wrench, flat-blade screwdriver, and Phillips™ screwdriver
- Access to a household cold water line with water pressure between 30 and 100 psi.
- A water supply line made of 1/4 inch (6.4 mm) OD, copper tubing. To determine the length of copper tubing needed, you will need to measure the distance from the icemaker inlet valve at the back of the refrigerator to your cold water pipe. Then add approximately 7 feet (2.1 meters), so the refrigerator can be moved out for cleaning (as shown).
- A shutoff valve to connect the water supply line to your household water system. **DO NOT** use a self-piercing type shutoff valve.
- A compression nut and ferrule (sleeve) for connecting the water supply line to the icemaker inlet valve.

NOTE

A water line kit is available from Sears stores or Sears Parts & Repair at an additional cost.

To Connect Water Supply Line To Icemaker Inlet Valve

1. Disconnect refrigerator from electric power source.
2. Place end of water supply line into sink or bucket. Turn ON water supply and flush supply line until water is clear. Turn OFF water supply at shutoff valve.
3. Unscrew plastic cap from water valve inlet and discard cap.
4. Slide brass compression nut, then ferrule (sleeve) onto water supply line, as shown.
5. Push water supply line into water valve inlet as far as it will go (1/4 inch). Slide ferrule (sleeve) into valve inlet and finger tighten compression nut onto valve. Tighten another half turn with a wrench; **DO NOT** over tighten.
6. With steel clamp and screw, secure water supply line to rear panel of refrigerator as shown.
7. Coil excess water supply line (about 2 1/2 turns) behind refrigerator as shown and arrange coils so they do not vibrate or wear against any other surface.
8. Turn ON water supply at shutoff valve and tighten any connections that leak.
9. Reconnect refrigerator to electrical power source.
10. To turn icemaker on, lower wire signal arm (see icemaker front cover for ON/OFF position of arm).

Door Removal / Reversal Instructions

Tools Necessary:

NOTE

The direction in which your refrigerator doors open (door swing) can be reversed, from left to right or right to left, by moving the door hinges from one side to the other. Reversing the door swing should be performed by a qualified person.

IMPORTANT

Before you begin, turn the refrigerator temperature control to "0" (OFF) and remove the electrical power cord from the wall outlet. Remove any food from door shelves.

1. Remove toe grille.
2. Remove top hinge cover. Trace around the hinge with a soft lead pencil. This makes reinstallation easier. Remove top hinge and lift door off center hinge pin. Set door aside.
3. Unscrew center hinge pin using adjustable wrench and save for reassembly. Ensure plastic washer stays on hinge pin.
4. Lift refrigerator door off of bottom hinge and set aside.
5. Remove center hinge and shim by removing inside screw and loosening two outside screws enough to allow hinge and shim to slide out. Tighten screws.
6. Loosen two outside screws on opposite side of refrigerator, remove inside screw and install center hinge.
7. Remove two screws on bottom hinge with 3/8" socket wrench.
8. Install bottom hinge on opposite side with the two screws removed from step 7.
9. Unscrew bottom hinge pin using adjustable wrench. Move hinge pin to other hole in hinge and tighten with adjustable wrench.
10. Reverse door handles (see instructions on next page).
11. Move freezer and refrigerator door stops to opposite side. Before starting screws, use an awl to puncture the foam.
12. Position refrigerator door onto bottom hinge pin and screw center hinge pin through center hinge into top of door. Close refrigerator door to help align hinge hole.
13. Tighten center hinge pin with adjustable wrench.
14. Remove cabinet and hinge hole plugs and move to opposite side.
15. Lower freezer door onto center hinge pin.
16. Close freezer door. Have an assistant lift up on opposite side of door while tightening screws to install top hinge.
17. Flip toe grille and reinstall.
18. Plug in electrical power cord and turn refrigerator temperature control to center position. Adjust setting as necessary.
19. Ensure that all gaskets seal properly and doors are level.

Door Removal / Reversal Instructions

Handle Style 1

To remove refrigerator handle:

(Handles may be easier to reverse while doors are off.)

1. Remove two screws attaching handle to top of refrigerator door.
2. Slide handle straight up and pull handle off mounting screw on door.
3. Remove mounting screw from door and install on other side, moving hole plugs from corresponding holes to opposite side.

To attach refrigerator handle:

1. Place top of handle over mounting screw, pull handle straight down until handle is aligned with screw holes on top of door.
2. Secure top of handle with two screws removed earlier.

To remove freezer handle:

(Handles may be easier to reverse while doors are off.)

1. Remove two screws attaching handle to bottom of freezer door.
2. Slide handle straight down and pull handle off mounting screw on door.
3. Remove mounting screw from door and install on other side, moving hole plugs from corresponding holes to opposite side.
4. Self-Adhesive Nameplate Models: Use plastic putty knife to gently peel off nameplate from door and reapply over old holes.

To attach freezer handle:

1. Place top of handle over mounting screw, pull handle straight up until handle is aligned with screw holes on bottom of door.
2. Secure bottom of handle with two screws removed earlier.

To reverse refrigerator/freezer handles:

Handles may be easier to reverse while doors are off.

Reverse freezer and refrigerator handles as shown.

Door Removal / Reversal Instructions

CAUTION

Wear gloves and use extreme **CAUTION** when installing these handles. The rounded end of the handles may be sharp.

IMPORTANT

To ensure proper installation of handles, please review these instructions and pictures thoroughly prior to installing the handles.

Additionally, before installing the door handles, make sure the door swing is correct. Follow instructions in the Use & Care Guide to reverse the doors, if necessary.

Handle Style 2

To attach refrigerator metal handle:

1. Place rounded part of handle onto mounting screw on
2. face of door and align the 2 holes in top of handle with the 2 holes in top of door. Handle should be mounted with set screw facing towards center of door. Do not tighten the set screw yet.
3. Install the 2 screws into the top of the handle.
4. Tighten the set screw on the rounded part of the handle until the handle is flush with the door, then tighten another 1/2 turn.

To attach freezer handle:

1. Place rounded part of handle onto mounting screw on face of door and align the 2 holes in bottom of handle with the 2 holes in bottom of door. Handle should be mounted with set screw facing towards center of door. Do not tighten the set screw yet.
2. Install the 2 screws into the bottom of the handle.
3. Tighten the set screw on the rounded part of the handle until the handle is flush with the door, then tighten another 1/2 turn.

To reverse refrigerator/freezer handles:

Handles may be easier to reverse while doors are off. Reverse freezer and refrigerator handles as shown.

Door Removal / Reversal Instructions

Handle Style 3

To remove refrigerator handle:

(Handles may be easier to reverse while doors are off.)

1. Remove two screws attaching handle to top of refrigerator door.
2. Slide handle straight up and pull handle off mounting screw on door.
3. Remove mounting screw from door and install on other side, moving hole plugs from corresponding holes to opposite side.

To attach refrigerator handle:

1. Place top of handle over mounting screw, pull handle straight down until handle is aligned with screw holes on top of door.
2. Secure top of handle with two screws removed earlier.

To attach freezer handle:

1. Place top of handle over mounting screw, pull handle straight up until handle is aligned with screw holes on bottom of door.
2. Secure bottom of handle with two screws removed earlier.

To reverse refrigerator/freezer handles:

Handles may be easier to reverse while doors are off.
Reverse freezer and refrigerator handles as shown.

To remove freezer handle:

(Handles may be easier to reverse while doors are off.)

1. Remove two screws attaching handle to bottom of freezer door.
2. Slide handle straight down and pull handle off mounting screw on door.
3. Remove mounting screw from door and install on other side, moving hole plugs from corresponding holes to opposite side.
4. Self-Adhesive Nameplate Models: Use plastic putty knife to gently peel off nameplate from door and reapply over old holes.

Features At A Glance

Features may vary according to model

Temperature Controls

Cool down period

To ensure safe food storage, allow the refrigerator to operate with the doors closed for at least 8 to 12 hours before loading it with food.

NOTE

When making changes to the temperature controls, wait 24 hours for the temperature to stabilize before making additional changes.

When first turning refrigerator on, move refrigerator and freezer controls to recommended setting. After 24 hours, adjust the controls as needed.

* IMPORTANT

Turning the refrigerator temperature control to "0" turns off the compressor and prevents the refrigerator from cooling, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator, you must unplug the power cord from the wall outlet.

Refrigerator & freezer controls

Temperature adjustment

- Adjust temperature gradually: move the knob in small increments, allowing the temperature to stabilize.
- For colder temperatures, turn the knob towards Colder.
- For warmer temperatures, turn the knob towards Cold.

Turning the refrigerator control will change temperatures in both compartments. For example, if the refrigerator control is turned to a colder setting, the freezer control may have to be adjusted to a warmer setting. Turning the freezer control will change only the freezer temperature.

To maintain temperatures, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

Freezer Control (some models)

OR

Refrigerator & Freezer Control (some models)

OR

Refrigerator Control (some models)

TEMPERATURE ADJUSTMENT GUIDE	
If Refrigerator compartment Is Too Warm	Turn Refrigerator Control Slightly Towards Colder.
If Refrigerator compartment Is Too Cold	Turn Refrigerator Control Slightly Towards Cold.
If Freezer compartment Is Too Warm	Turn Freezer Control Slightly Towards Colder.
If Freezer compartment Is Too Cold	Turn Freezer Control Slightly Towards Cold.
* To Turn Refrigerator Off	Turn Refrigerator Control To 0.

Looking Inside

CAUTION

To avoid personal injury or property damage, handle tempered glass shelves carefully. Shelves may break suddenly if nicked, scratched, or exposed to sudden temperature change.

Shelf Adjustment

Refrigerator shelves are easily adjusted to suit individual needs. Before adjusting the shelves, remove all food.

To adjust sliding shelves:

1. Remove shelf by pulling forward to stop position.
2. Lift front edge up and pull out.

To replace shelf, rest side edges on any pair of shelf rails and carefully push shelf back into position.

Sliding Glass Shelf

Sliding Wire Shelf

Door storage

Door bins, shelves, and racks are provided for convenient storage of jars, bottles, and cans. Frequently used items can be quickly selected.

Some models have door racks or bins that can accommodate gallon-sized plastic drink containers and economy-sized jars and containers. Some racks are adjustable for maximum storage capacity.

The dairy compartment, which is warmer than the general food storage section, is intended for short term storage of cheese, spreads, or butter.

Door Rack

NOTE

Cantilever shelves are supported at the back of the refrigerator. Cantilever shelves are available in either glass or wire.

To adjust cantilever shelves:

1. Lift front edge up.
2. Pull shelf out.

Replace the shelf by inserting the hooks at rear of the shelf into the wall bracket. Lower the shelf into the desired slots and lock into position.

SpillProof™ glass shelves (some models) catch and hold accidental spills. In some models, the SpillProof™ shelves slide out for easy access to food and for fast cleaning. The shelves slide out independently of the cantilever brackets. Just pull the front of the shelf forward. The shelf can be extended as far as the stopper will allow but it is **not** removable from the cantilever bracket.

Full Width Cantilever Glass Shelf

Cantilever Glass Shelf Fixed and Sliding

Adjustable door bins

Some models have adjustable door bins that can be moved to suit individual needs.

To move door bins

1. Lift bin straight up.
2. Remove bin.
3. Place bin in desired position.
4. Lower bin onto supports until locked in place.

Looking Inside

Freezer Tilt Out

Door Rack

The Tilt-Out Door Rack tilts out for easy access. Pinch the sides and pull out for easy cleaning.

Crisper Humidity Control (some models)

The crisper humidity control, present on the crisper drawers of some models, allows you to adjust the humidity within the crisper. This can extend the life of fresh vegetables that keep best in high humidity.

NOTE

Leafy vegetables keep best when stored with the Humidity Control set on **High Humidity**, or in a drawer without a Humidity Control. This keeps incoming air to a minimum and maintains maximum moisture content. Store non-leafy vegetables and fruits still in their skins at the low humidity setting.

Deli Drawer (some models)

Some models are equipped with a Deli Drawer for storage of luncheon meats, spreads, cheeses, and other deli items.

Special Item Rack (some models)

The innovative design of the Special Item Rack allows you to store a six-pack of 12 ounce drink cans, a bottle of wine, a two-liter soft drink bottle, or a carton of eggs. The Special Item Rack mounts on the left side of your refrigerator. To install, just slide the Special Item Rack onto any shelf as shown in the drawing.

Crispers (some models)

The crispers, located under the bottom refrigerator shelf, are designed for storing fruits, vegetables, and other fresh produce. Wash items in clear water and remove excess water before placing them in the crispers. Items with strong odors or high moisture content should be wrapped before storing.

Wine Rack (some models)

There are two different style Wine Racks. (See A and B below.) The Wine Rack stores bottles of wine, or single two-liter plastic bottles of juice or soda pop. To install, slide Wine Rack (A) onto the shelf with the curve facing in. To remove, slide the Wine Rack out. Install on either side of shelf. The Wire Wine Rack (B) simply sets on the shelf.

Food Storage & Energy Saving Ideas

Food storage Ideas

Fresh Food Storage

- The fresh food compartment should be kept between 34°F and 40° F with an optimum temperature of 37° F.
- Avoid overcrowding the refrigerator shelves. This reduces the circulation of air around the food and results in uneven cooling.

Fruits and Vegetables

- Storage in the crisper drawers helps preserve the fruit and vegetable quality for longer time periods.

Meat

- Raw meat and poultry should be wrapped securely so leakage and contamination of other foods or surfaces does not occur.

Frozen Food Storage

- The freezer compartment should be kept at 0° F or lower.
- A freezer operates most efficiently when it is at least 2/3 full.

Packaging Foods for Freezing

- To minimize dehydration and quality deterioration, use aluminum foil, freezer wrap, freezer bags or airtight containers. Force as much air out of the packages as possible and seal them tightly. Trapped air can cause food to dry out, change color, and develop an off-flavor (freezer burn).
- Wrap fresh meats and poultry with suitable freezer wrap prior to freezing.
- Do not refreeze meat that has completely thawed.

Loading the Freezer

- Avoid adding too much warm food to the freezer at one time. This overloads the freezer, slows the rate of freezing, and can raise the temperature of frozen foods.
- Leave a space between the packages, so cold air can circulate freely, allowing food to freeze as quickly as possible.
- Avoid storing hard-to-freeze foods such as ice cream and orange juice on the freezer door shelves. These foods are best stored in the freezer interior where the temperature varies less.

Energy saving ideas

- Locate the refrigerator in the coolest part of the room, out of direct sunlight, and away from heating products or registers. Do not place the refrigerator next to heat-producing appliances such as a range, oven, or dishwasher. If this is not possible, a section of cabinetry or an added layer of insulation between the two appliances will help the refrigerator operate more efficiently.
- Level the refrigerator so that the doors close tightly.
- Refer to this Use & Care Manual for the suggested temperature control settings.
- Periodic cleaning of the condenser will help the refrigerator run more efficiently. See the Care and Cleaning Chart .
- Do not overcrowd the refrigerator or block cold air vents. Doing so causes the refrigerator to run longer and use more energy.
- Cover foods and wipe containers dry before placing them in the refrigerator. This cuts down on moisture build-up inside the unit.
- Organize the refrigerator to reduce door openings. Remove as many items as needed at one time and close the door as soon as possible.

Ice Service

If your refrigerator has an automatic icemaker, it will provide a sufficient supply of ice for normal use. During the initial startup of your refrigerator, no ice will be produced during the first 24 hours of operation. Air in new plumbing lines may cause the icemaker to cycle two or three times before making a full tray of ice. With no usage, it will take approximately one to two days to fill the ice container.

New plumbing connections may cause the first production of ice cubes to be discolored or have an odd flavor. Discard ice made during the first 24 hours.

NOTE

Automatic icemakers are also optional accessories that may be installed in most models at anytime. **Call 1-800-4MY-HOME® for information.**

Turning your Icemaker on

After the plumbing connections have been completed, the water supply valve must be opened. Place the ice container under the icemaker, pushing it as far back as possible. Lower the wire signal arm to its “down” or ON position.

Turning your Icemaker off

To stop the icemaker, lift the wire signal arm until it clicks and locks in the “up” or OFF position. The icemaker also turns off automatically when the ice container is full. If your model has an adjustable freezer shelf, place the shelf in the lower position, so that the wire signal arm will hit the ice when the container is full.

IMPORTANT

Your icemaker is shipped from the factory with the wire signal arm in the ON position. To ensure proper function of your icemaker, hook up water supply immediately or turn icemaker OFF by lifting the wire signal arm until it clicks and locks in the UP position. **If the icemaker is not turned off and the water supply is not connected, the water valve will make a loud chattering noise.**

Ice Production: What To Expect

The icemaker will produce 2 to 3 pounds of ice every 24 hours depending on usage conditions. Ice is produced at a rate of 8 cubes every 75 to 160 minutes.

CAUTION

Chemicals from a malfunctioning softener can damage the icemaker. If the icemaker is connected to soft water, ensure that the softener is maintained and working properly.

Icemaker Tips

- Ice cubes stored too long may develop an odd flavor. Empty the ice container and ensure that the wire signal arm is in its “down” or ON position. The icemaker will then produce more ice.
- Occasionally shake the ice container to keep ice separated.
- Stop the icemaker when cleaning the freezer and during vacations.
- If the icemaker will be turned off for a long period of time, turn the water supply valve to a closed position.

NOTE

For information on icemaker noises, see **Normal Operating Sounds** section.

CAUTION

DO NOT place the ice container in your dishwasher.

- Wash the ice container in warm water with mild detergent. Rinse well and dry.

Normal Operating Sounds

Understanding the sounds you may hear

Your new high-efficiency refrigerator may make unfamiliar sounds. These are all normal sounds and soon will become familiar to you. They also indicate your refrigerator is operating as designed. Hard surfaces, such as vinyl or wood floors, walls, and kitchen cabinets may make sounds more noticeable. Listed below are descriptions of some of the most common sounds you may hear, and what is causing them.

NOTE

Rigid foam insulation is very energy efficient, but is not a sound insulator.

A. Evaporator

The flow of refrigerant through the evaporator may create a boiling or gurgling sound.

B. Evaporator Fan

You may hear air being forced through the refrigerator by the evaporator fan.

C. Defrost Heater

During defrost cycles, water dripping onto the defrost heater may cause a hissing or sizzling sound. After defrosting, a popping sound may occur.

IMPORTANT

During the automatic defrost cycle, you may notice a red glow in the vents on the back wall of your freezer compartment. This is normal during the defrost cycle.

D. Automatic Icemaker

If your refrigerator is equipped with an automatic ice maker, you will hear ice cubes falling into the ice bin.

E. Cold Control & Defrost Timer or Automatic Defrost Control

These parts can produce a snapping or clicking sound when turning the refrigerator on and off. The timer also produces sounds similar to an electric clock.

F. Condenser Fan

If condenser coils are located underneath your refrigerator as shown in the drawing at the left, you have a condenser fan. You may hear air being forced through the condenser by the condenser fan.

G. Compressor

Modern, high-efficiency compressors operate much faster than older models. The compressor may have a high-pitched hum or pulsating sound.

H. Water Valve

If your refrigerator is equipped with an automatic ice maker, you will hear a buzzing sound as the water valve opens to fill the icemaker during each cycle.

I. Drain Pan (Nonremovable)

You may hear water running into the drain pan during the defrost cycle. The drain pan will be located on top of the compressor for air-cooled condensers (black coils on back of refrigerator).

J. Condenser Coils (Fan-cooled models only)

You may hear air being forced through the condenser coils.

Care & Cleaning

Protecting Your investment

Keeping your refrigerator clean maintains appearance and prevents odor build-up. Wipe up any spills immediately and clean the freezer and fresh food compartments at least twice a year. When cleaning, take the following precautions:

- Never use CHLORIDE or cleaners with bleach to clean stainless steel.
- Do not wash any removable parts in a dishwasher.
- Always unplug the electrical power cord from the wall outlet before cleaning.
- Remove adhesive labels by hand. Do not use razor blades or other sharp instruments which can scratch the appliance surface.
- Do not remove the serial plate.

Do not use abrasive cleaners such as window sprays, scouring cleansers, brushes, flammable fluids, cleaning waxes, concentrated detergents, bleaches or cleansers containing petroleum products on plastic parts, interior doors, gaskets or cabinet liners. Do not use paper towels, metallic scouring pads, or other abrasive cleaning materials or strong alkaline solutions.

NOTE

If you set your temperature controls to turn off cooling, power to lights and other electrical components will continue until you unplug the power cord from the wall outlet.

CAUTION

- Pull the refrigerator straight out to move it. Shifting it from side to side may damage flooring. Be careful not to move the refrigerator beyond the plumbing connections.
- Damp objects stick to cold metal surfaces. Do not touch refrigerated surfaces with wet or damp hands.

IMPORTANT

If you store or move your refrigerator in freezing temperatures, be sure to completely drain the water supply system. Failure to do so could result in water leaks when the refrigerator is put back into service. Contact a service representative to perform this operation.

Care & Cleaning Tips		
Part	What To Use	Tips and Precautions
Interior & Door Liners	<ul style="list-style-type: none"> • Soap and water • Baking soda and water 	Use 2 tablespoons of baking soda in 1 quart of warm water. Be sure to wring excess water out of sponge or cloth before cleaning around controls, light bulb or any electrical part.
Door Gaskets	<ul style="list-style-type: none"> • Soap and water 	Wipe gaskets with a clean soft cloth.
Drawers & Bins	<ul style="list-style-type: none"> • Soap and water 	Use a soft cloth to clean drawer runners and tracks.
Glass Shelves	<ul style="list-style-type: none"> • Soap and water • Glass cleaner • Mild liquid sprays 	Allow glass to warm to room temperature before immersing in warm water.
Toe Grille	<ul style="list-style-type: none"> • Soap and water • Mild liquid sprays • Vacuum attachment 	Vacuum dust from front of toe grille. Remove toe grille (see Installation Instructions). Vacuum backside, wipe with sudsy cloth or sponge. Rinse and dry.
Exterior & Handles	<ul style="list-style-type: none"> • Soap and water • Non Abrasive Glass Cleaner 	Do not use commercial household cleaners containing ammonia, bleach or alcohol to clean handles. Use a soft cloth to clean smooth handles. DO NOT use a dry cloth to clean smooth doors.
Exterior & Handles (Stainless Steel Models Only)	<ul style="list-style-type: none"> • Soap and water • Stainless Steel Cleaners 	<p>Never use CHLORIDE or cleaners with bleach to clean stainless steel.</p> <p>Clean stainless steel front and handles with non-abrasive soapy water and a dishcloth. Rinse with clean water and a soft cloth. Use a non-abrasive stainless steel cleaner. These cleaners can be purchased at most home improvement or major department stores. Always follow manufacturer's instructions. Do not use household cleaners containing ammonia or bleach.</p> <p>NOTE: Always clean, wipe and dry with the grain to prevent scratching. Wash the rest of the cabinet with warm water and mild liquid detergent. Rinse well, and wipe dry with a clean soft cloth.</p>
Replacing Light Bulbs	<ul style="list-style-type: none"> • Unplug refrigerator • Wear gloves • Remove light cover • Replace old bulb • Replace light cover • Plug in the refrigerator 	<p>CAUTION: Wear gloves when replacing light bulbs to avoid getting cut.</p> <p>Use same wattage when replacing bulb</p>

Care & Cleaning (continued)

Never Clean Condenser (some models)

If your refrigerator is equipped with a Never Clean condenser, there's no need to clean the condenser under normal operating conditions. If the refrigerator is operated under particularly dusty or greasy conditions, or if there is significant pet traffic in your home, it may be necessary to periodically clean the condenser for maximum efficiency.

Replacing the freezer light bulb (some models)

1. Unplug refrigerator.
2. Wear gloves as protection against possible broken glass.
3. Unsnap light cover as shown.
4. Unscrew and replace old bulb with an appliance bulb of the same wattage.
5. Replace light shield.
6. Remember to plug the refrigerator back in.

Replacing Mid-Level Refrigerator light bulb (some models)

1. Unplug refrigerator.
2. Wear gloves as protection against possible broken glass.
3. Unsnap light cover.
4. Unscrew and replace old bulb(s) with an appliance bulb of the same wattage.
5. Replace light cover.
6. Remember to plug the refrigerator back in.

CAUTION

Wear gloves to avoid cuts when replacing light bulbs.

Freezer Light Cover Removal

Refrigerator Mid-Level Light Cover Removal

Vacation and Moving Tips

Short Vacations	<ul style="list-style-type: none">• Leave refrigerator operating during vacations of 3 weeks or less.• Use all perishable items from refrigerator compartment.• Turn automatic icemaker off and empty ice bucket, even if you will only be gone for a few days.
Long Vacations	<ul style="list-style-type: none">• Remove all food and ice if you will be gone one month or more.• Turn off automatic icemaker and turn water supply valve to closed position.• Turning refrigerator controls to "OFF" by pressing and holding the On/Off button for 3 seconds (electronic) or turning control knobs to "0" (manual) on the mechanical controls only controls your refrigerator's cooling system. To turn off power to your refrigerator you must unplug the power cord from the wall outlet.• Clean interior thoroughly.• Leave both doors open to prevent odors and mold build-up. Block doors open if necessary.
Moving	<ul style="list-style-type: none">• Remove all food and ice.• If using handcart, load from side.• Adjust rollers all the way up to protect them during sliding or moving.• Pad cabinet exterior to avoid scratching surface.

Problem	Cause	Correction
AUTOMATIC ICEMAKER (some models)		
Icemaker is not making any ice.	<ul style="list-style-type: none"> • Icemaker wire signal arm is in the “up” or OFF position. • Household water line valve is not open. • Freezer is not cold enough. • Saddle valve on cold water pipe is clogged or restricted by foreign material. 	<ul style="list-style-type: none"> • Move wire signal arm to the “down” or ON position. (side mounted) • Turn on household water line valve. • See PROBLEM column TEMPERATURES ARE TOO WARM. • Turn off household water line valve. Remove valve. Ensure that valve is not a self-piercing saddle valve. Clean valve. Replace valve if necessary.
Icemaker is not making enough ice.	<ul style="list-style-type: none"> • Icemaker is producing less ice than you expect. • Freezer is not cold enough. • Household water line valve is not completely open. 	<ul style="list-style-type: none"> • The Icemaker will produce 2 to 3 pounds of ice every 24 hours depending on usage conditions. Ice is produced at a rate of 8 cubes every 75 to 160 minutes. • See PROBLEM column TEMPERATURES ARE TOO WARM. • Turn on household water line valve.
Icemaker will not stop making ice.	<ul style="list-style-type: none"> • Icemaker wire signal arm is being held down by some item in the freezer. 	<ul style="list-style-type: none"> • Move item and release wire signal arm. Remove any ice cubes that are frozen together over the wire signal arm.
Ice cubes are freezing together.	<ul style="list-style-type: none"> • Ice cubes are not being used frequently enough. • Freezer control is set too warm. • Very little food in freezer. 	<ul style="list-style-type: none"> • Remove ice container and discard ice from container. Icemaker will produce fresh supply. • Set freezer control to colder setting. Allow 24 hours for temperature to stabilize. • Add more food to freezer.
Ice has bad odor and taste.	<ul style="list-style-type: none"> • Ice has picked up odor or flavor from strong food stored in refrigerator or freezer. • Water running to Icemaker has poor taste or odor. • Ice not used frequently enough. 	<ul style="list-style-type: none"> • Cover foods tightly. Discard stale ice. Icemaker will produce fresh supply. Replace air filter (available in select models). • Add filter to water supply line. Consult a water purifying company. • Discard stale ice.
LIGHT BULB IS NOT ON		
Light bulb is not on.	<ul style="list-style-type: none"> • Light bulb is burned out. • No electric current is reaching refrigerator. 	<ul style="list-style-type: none"> • See REPLACING LIGHT BULBS in NORMAL OPERATING SOUNDS section. • See PROBLEM column RUNNING OF REFRIGERATOR.
ODORS IN REFRIGERATOR		
Interior is dirty.	<ul style="list-style-type: none"> • Interior needs to be cleaned. • Food with strong odors is in refrigerator. 	<ul style="list-style-type: none"> • See table of Care and Cleaning Tips in CARE & CLEANING section. • Cover food tightly.

Problem	Cause	Correction
OPENING/CLOSING OF DOORS/DRAWERS		
Door(s) will not close.	<ul style="list-style-type: none"> Door was closed too hard, causing other door to open slightly. Refrigerator is not level. It rocks on the floor when moved slightly. 	<ul style="list-style-type: none"> Close both doors gently. Ensure floor is level and solid, and can adequately support the refrigerator. Contact a carpenter to correct a sagging or sloping floor.
Drawers are difficult to move.	<ul style="list-style-type: none"> Food is touching shelf on top of drawer. Track that drawers slide on is dirty. 	<ul style="list-style-type: none"> Remove top layer of items in drawer. Ensure drawer is properly installed on track. Clean drawer, rollers, and track. See table of Care and Cleaning Tips in CARE & CLEANING section.
RUNNING OF REFRIGERATOR		
Compressor does not run.	<ul style="list-style-type: none"> Refrigerator is in defrost cycle. Plug at electrical outlet is disconnected. House fuse blown or tripped circuit breaker. Power outage. 	<ul style="list-style-type: none"> This is normal for a fully automatic defrost refrigerator. The defrost cycle occurs periodically, lasting about 30 minutes. Ensure plug is tightly pushed into outlet. Check/replace fuse with a 15 amp time-delay fuse. Reset circuit breaker. Check house lights. Call local electric company.
Refrigerator runs too much or too long.	<ul style="list-style-type: none"> Room or outside weather is hot. Refrigerator has recently been disconnected for a period of time. Automatic icemaker is operating. Doors are opened too frequently or too long. Fresh Food/freezer door may be slightly open. Fresh Food/freezer gasket is dirty, worn, cracked, or poorly fitted. 	<ul style="list-style-type: none"> It is normal for the refrigerator to work longer under these conditions. It takes 8-12 hours for the refrigerator to cool down completely. Icemaker operation causes refrigerator to run slightly more. Warm air entering the refrigerator causes it to run more. Open doors less often. Ensure refrigerator is level. Keep food and containers from blocking door. See PROBLEM column OPENING/CLOSING OF DOORS/DRAWERS. Clean or change gasket. Leaks in door seal will cause refrigerator to run longer in order to maintain desired temperatures.
Compressor goes off and on frequently.	<ul style="list-style-type: none"> Thermostat keeps the refrigerator at a constant temperature. 	<ul style="list-style-type: none"> This is normal. Refrigerator goes on and off to keep temperature constant.
TEMPERATURES ARE TOO COLD		
Freezer temperature too cold. Fresh Food temperature is satisfactory.	<ul style="list-style-type: none"> Freezer control is set too cold. 	<ul style="list-style-type: none"> Set freezer control to a warmer setting. Allow 24 hours for temperature to stabilize.
Fresh Food temperature too cold. Freezer temperature is satisfactory.	<ul style="list-style-type: none"> Fresh Food control is set too cold. 	<ul style="list-style-type: none"> Set fresh food control to a warmer setting. Allow 24 hours for temperature to stabilize.
Food stored in drawers freezes.	<ul style="list-style-type: none"> Fresh Food control is set too cold. 	<ul style="list-style-type: none"> See solution above.

Before You Call

Problem	Cause	Correction
TEMPERATURES ARE TOO WARM		
Freezer/Fresh Food temperature is too warm.	<ul style="list-style-type: none"> Doors are opened too frequently or too long. Door is slightly open. 	<ul style="list-style-type: none"> Warm air enters the refrigerator whenever the door is opened. Open the door less often. See PROBLEM column OPENING/CLOSING OF DOORS/DRAWERS.
Freezer temperature is too warm. Fresh Food temperature is satisfactory.	<ul style="list-style-type: none"> Freezer control is set too warm. 	<ul style="list-style-type: none"> Set freezer control to a colder setting. Allow 24 hours for temperature to stabilize.
Fresh Food temperature is too warm. Freezer temperature is satisfactory.	<ul style="list-style-type: none"> Fresh Food control is set too warm. 	<ul style="list-style-type: none"> Set Fresh Food control to a colder setting. Allow 24 hours for temperature to stabilize.
WATER/MOISTURE/FROST INSIDE REFRIGERATOR		
Moisture collects on inside of refrigerator walls.	<ul style="list-style-type: none"> Weather is hot and humid. Door is slightly open. Door is opened too often or too long. Open containers. 	<ul style="list-style-type: none"> The rate of frost buildup and internal sweating increases. See PROBLEM column OPENING/CLOSING OF DOORS/DRAWERS. Open door less often. Keep containers covered.
Water collects on bottom side of drawer cover.	<ul style="list-style-type: none"> Vegetables contain and give off moisture. 	<ul style="list-style-type: none"> It is not unusual to have moisture on the bottom side of the cover. Move humidity control (some models) to lower setting.
Water collects in bottom of drawer.	<ul style="list-style-type: none"> Washed vegetables and fruit drain while in the drawer. 	<ul style="list-style-type: none"> Dry items before putting them in the drawer. Water collecting in bottom of drawer is normal.
WATER/MOISTURE/FROST OUTSIDE REFRIGERATOR		
Moisture collects on outside of refrigerator or between doors.	<ul style="list-style-type: none"> Weather is humid. Door is slightly open, causing cold air from inside refrigerator to meet warm air from outside. 	<ul style="list-style-type: none"> This is normal in humid weather. When humidity is lower, the moisture should disappear. See PROBLEM column OPENING/CLOSING OF DOORS/DRAWERS.
