## CARE & Maintenance

It is advised that the Canopy should be removed in the winter for best protection and length of use. Our steel components for garden accessories and furniture are treated with rust inhibiting paint that protects it from rusting. However, due to the nature of steel, surface oxidation (rusting) will occur once these protective coatings are scratched. This is a natural process and is not a defect! To minimize this condition, we recommend care when assembling & handling the product to prevent scratching the paint. Should any scratching or damage occur, it is strongly recommended that consumers buy touch up paint prior to the assembly process so that any parts they scratch during assembly are touched up. Surface rust can also be easily removed with a very light application of common cooking oil. If surface oxidation (rusting) occurs and if no measure is taken to prevent this, the oxidation may start dripping on to deck or patio and cause damaging stains, which may be difficult to remove. This can be prevented if the measure is taken to keep the product from oxidizing. Also the use of wax candle to lubricate the zippers once a year will keep them running smoothly.
