

## Installing the Refrigerated Drawers

Your Electrolux Refrigerated Drawer unit has been designed for either free-standing or built-in installation. When built-in, your Refrigerated Drawers does not require additional air space for top, sides or rear. In either case, the front grille must **NOT** be obstructed.

### NOTE

To ease unit installation and removal, it is recommended that the cabinet rough opening dimensions be increased by at least  $\frac{1}{4}$  inch over the dimensions given for your unit.

### NOTE

All units require zero clearance when installed flush with a cabinet or wall. Electrolux stainless steel models require a minimum  $2\frac{7}{8}$  inch handle clearance when installed against a wall or cabinet that extends beyond the front edge of the unit.

Unit Dimensions

Width	Height	Depth
$23\frac{7}{8}$ inch	$33\frac{3}{4}$ - $34\frac{3}{4}$ inches	$26\frac{3}{8}$ inch

Product Dimensions

## 6 Installation

### Site Preparation

- 1 Position the unit on a flat, level surface capable of supporting the entire weight of the unit. Remember the unit will be significantly heavier once it is fully loaded.
- 2 This unit requires a grounded and polarized 115 VAC, 60Hz, 15A circuit (normal household current).
- 3 Avoid connecting the unit to a Ground Fault Interrupter (GFI). GFIs are prone to nuisance tripping which will cause the unit to shut down. GFIs are generally not used on circuits which power equipment that must run unattended for long periods of time.
- 4 The unit must be installed according to your state and local laws and regulations.

#### WARNING

##### ELECTROCUTION HAZARD!

**Electrical Grounding Required.** This appliance is equipped with a three prong (grounding) polarized plug for your protection against possible shock hazards.

- **NEVER** remove the round grounding prong from the plug.
- **NEVER** use a two-prong grounding adapter.
- **NEVER** use an extension cord to connect power to the unit.

Where a two-prong wall receptacle is encountered or a longer power cord is required, contact a qualified electrician to have it replaced in accordance with applicable electrical codes.

- 5 Position the unit to allow free air flow through the front grille.

- 6 Wipe out inside of unit with a damp cloth.
- 7 Be sure to install the Anti-Tip bracket. Follow the instructions provided with the Anti-Tip bracket kit.

### Installing the Anti-Tip Device

#### WARNING

**Do not double stack two units as shown below. This may cause serious personal injury.**

#### CAUTION

If your Refrigerated Drawers are not located under a counter top (free standing), you must use an anti-tip device installed as per these instructions. If the Refrigerated Drawers are removed from their location for any reason, make sure that the device is properly engaged when you push the Refrigerated Drawers back into the original location. If the device is not properly engaged, there is a risk of the Refrigerated Drawers tipping over, causing property or personal injury if you or a child stand, sit, or lean on an open drawer.

#### NOTE

If installing on a concrete floor, concrete fasteners are required, (not included with the anti-tip kit).

## CAUTION

Any finished flooring should be protected with appropriate material to avoid damage when moving the unit.

## WARNING

- ALL DRAWERS CAN TIP
- INJURY COULD RESULT
- INSTALL ANTI-TIP BRACKET PACKED WITH UNIT
- SEE INSTRUCTIONS

### Floor Mount Installation

The anti-tip bracket is to be located on the floor in the left or right rear corner of the Refrigerated Drawers as shown in Figure 6.

### Step by step instructions for locating the position of the bracket:

- 1 Decide where you want to place the Refrigerated Drawers. Slide them into place, being careful not to damage the floor, leaving 1" (2.5 cm) of clearance from the rear wall to allow room for the anti-tip bracket.
- 2 Raise the rear leveling legs approximately 1/4" (6 mm) to allow engagement with the anti-tip bracket. Level the unit by adjusting all the leveling legs as required. Turning the leveling leg counterclockwise will raise the unit and clockwise will lower the unit.

- 3 Make sure the Refrigerated Drawers are in the desired location, then mark on the floor the rear and side corner of the cabinet where the anti-tip bracket will be installed. If the installation does not allow marking the rear corner of the cabinet, then make temporary lines on the floor marking the front corner of the cabinet, excluding the drawer. Slide the Refrigerated Drawers out of the way. From the temporary line extend the sidewall line back 21 1/2" (54.6cm) as shown in Figure 7.
- 4 Align the anti-tip bracket to the marks on the floor so the side of the bracket lines up with the side of the cabinet mark, and the "V" notches on the anti-tip bracket line up with the end of the 21 1/2" (54.6cm) line (Rear of cabinet line).
- 5 Fasten the anti-tip bracket to the floor using the supplied screw. (See Figure 7).
- 6 Slide the cabinet back into position, making sure the rear cabinet leveling leg slides under the anti-tip bracket engaging the slot.

## WARNING

**TIP OVER HAZARD:** One of the rear cabinet leveling legs must be engaged under an anti-tip bracket.
