## FCC Notice “Declaration of Conformity Information”

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- ❖ Reorient or relocate the receiving antenna.
- ❖ Increase the separation between the equipment and receiver.
- ❖ Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- ❖ Consult the dealer or an experienced radio/TV technician for help.

---

### NOTE

Only Peripherals complying with the FCC Class B limits may be attached to this equipment. Operation with noncompliant peripherals or peripherals not recommended by Toshiba is likely to result in interference to radio and TV reception. Shielded cables must be used between the external devices and the computer's ports. Changes or modifications made to this equipment not expressly approved by Toshiba or parties authorized by Toshiba could void the user's authority to operate the equipment.

---

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- ❖ This device may not cause harmful interference.
- ❖ This device must accept any interference received, including interference that may cause undesired operation.

## Bluetooth® Wireless Technology Interoperability

*Bluetooth*® modules are designed to be interoperable with any product with *Bluetooth* wireless technology that is based on Frequency Hopping Spread Spectrum (FHSS) radio technology, and is compliant to:

- ❖ *Bluetooth* Specification as defined and approved by The *Bluetooth* Special Interest Group.
- ❖ Logo certification with *Bluetooth* wireless technology as defined by The *Bluetooth* Special Interest Group.

---

### CAUTION

*Bluetooth* modules enable wireless networks over two or more (up to a total of seven) TOSHIBA portable devices. Please contact TOSHIBA computer product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or [support.toshiba.com](http://support.toshiba.com) in the United States for more information.

When you use a *Bluetooth* module close to 2.4 GHz Wireless LAN devices, *Bluetooth* transmissions might slow down or cause errors. If you detect certain interference while you use a *Bluetooth* device, always change the frequency, move your device to the area outside of the interference range of 2.4 GHz Wireless LAN devices (40 meters/43.74 yards or more) or stop transmitting from your device. Please contact TOSHIBA computer product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or [support.toshiba.com](http://support.toshiba.com) in the United States for more information.

*Bluetooth* and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use *Bluetooth* and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection. If you should experience any such problem, immediately turn off either one of your *Bluetooth* or Wireless LAN. Please contact Toshiba computer product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or [support.toshiba.com](http://support.toshiba.com) in the United States for more information.

## Bluetooth® Wireless Technology and Your Health

The products with *Bluetooth*® wireless technology, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by devices with *Bluetooth* wireless technology however is much less than the electromagnetic energy emitted by wireless devices such as mobile phones.

Because products with *Bluetooth* wireless technology operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes *Bluetooth* wireless technology is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

In some situations or environments, the use of *Bluetooth* wireless technology may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- ❖ Using the equipment with *Bluetooth* wireless technology on board airplanes, or
- ❖ In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the device with *Bluetooth* wireless technology prior to turning on the equipment.

---

### CAUTION

#### Exposure to Radio Frequency Radiation

The radiated output power of the *Bluetooth* module is far below the FCC radio frequency exposure limits. Nevertheless, the *Bluetooth* module shall be used in such a manner that the potential for human contact during normal operation is minimized.

---

---

## Wireless Interoperability

Wireless LAN products are designed to be interoperable with any wireless LAN product that is based on Direct Sequence Spread Spectrum (DSSS) radio technology, and is compliant to:

- ❖ The IEEE 802.11 Standard on Wireless LANs (Revision A/B/G), as defined and approved by the Institute of Electrical and Electronics Engineers.
- ❖ The Wireless Fidelity (Wi-Fi®) certification as defined by the Wi-Fi Alliance. The “Wi-Fi CERTIFIED” logo is a certification mark of the Wi-Fi Alliance.

---

### CAUTION

*Bluetooth*® and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use *Bluetooth* and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection.

If you should experience any such problem, immediately turn off your *Bluetooth* or Wireless LAN device.

Please contact Toshiba computer product support on Web site

<http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or [support.toshiba.com](http://support.toshiba.com) in the United States for more information.

## The European Union WEEE (Waste from Electrical and Electronic Equipment) Directive Information

The European Union WEEE (Waste from Electrical and Electronic Equipment) Directive is intended to protect the quality of the environment and human health through the responsible use of natural resources and the adoption of waste management strategies that focus on recycling and reuse. This Directive requires producers of electrical and electronic products put on the market in European Union (EU) member countries after August 2005 to mark such products with a crossed-out wheeled bin with a black bar symbol. If the product's battery or accumulator contains more than the specified values of lead (Pb), mercury (Hg), and/or cadmium (Cd) defined in the Battery Directive (2006/66/EC), then the chemical symbols for lead (Pb), mercury (Hg) and/or cadmium (Cd) will appear below the crossed out wheeled bin symbol on the battery.

Pb, Hg, Cd

In the European Union, these symbols indicate that when the last end user wishes to discard this product, it must be sent to appropriate facilities for recovery and recycling. This Directive applies to EU member countries only and does not apply to end users in other countries such as the United States.

Although the initial emphasis is in Europe, Toshiba is already working with design engineers, suppliers, and other partners to determine appropriate worldwide product life cycle planning and end-of-life strategies for our products. Please contact your local government for applicable laws and regulations governing the disposal of this product. # Chapter 1

## Getting Started

---

This chapter provides tips for using your computer effectively, summarizes how to connect components, and explains what to do the first time you use your computer.

Please read the safety instruction information on the Quick Start document (that shipped with your computer) carefully and make sure you fully understand the instructions before you attempt to use your computer in order to avoid potential hazards that could cause bodily injury, property damage, or damage the computer.

### Selecting a place to work

Your computer is portable and designed to be used in a variety of circumstances and locations.

### Setting up a work environment

Place the computer on a hard flat surface that is large enough for the computer and any other items you are using, such as a printer. Leave enough space around the computer and other equipment to provide adequate ventilation. Otherwise, they may overheat.

To keep your computer in prime operating condition, protect your work area from:

- ❖ Dust, moisture, and direct sunlight.

- ❖ Equipment that generates a strong electromagnetic field, such as stereo speakers (other than speakers that are connected to the computer) or speakerphones.
- ❖ Rapid changes in temperature or humidity and sources of temperature change such as air conditioner vents or heaters.
- ❖ Extreme heat, cold, or humidity.
- ❖ Liquids and corrosive chemicals.

## **Keeping yourself comfortable**

This section provides information for setting up your work environment and tips for working comfortably throughout the day.

## **Computer user comfort recommendations**

### **Good Working Posture**

- ❖ Adjust your chair height: your feet should be flat on the floor and the bottom of your thighs should be evenly supported by the seat. If your feet cannot reach the floor, use a foot rest. Avoid pressure points behind the knee or under the thigh.
- ❖ The space under your desk should be free of clutter so that your legs and feet are not restricted, and you can get close enough to your notebook and other items that you use frequently.
- ❖ Adjust the chair back rest: it should match the curve of your back and provide comfortable back support.
- ❖ Adjust the chair arm rests: they should be about the same height as the keyboard and comfortably support your arms, allowing your shoulders to relax.
- ❖ When using the keyboard, it should be centered in front of you.
- ❖ The keyboard and pointing device should be close to your elbow level. The keyboard should be flat so that your wrists are straight when typing. However, if the notebook is on a work surface that is above your elbow height you may need to slope the notebook to keep your wrists straight.
- ❖ Work with relaxed shoulders.

- ❖ When typing, keep your wrists straight and try not to rest your wrists on the notebook. Support your arms on your forearm area. The forearms can be supported by the chair arm supports or the desk surface.
- ❖ The notebook display should be tilted so that the image on the screen is clear.
- ❖ Avoid glare: position the notebook so that light sources (lamps or windows) do not shine or reflect directly into your eyes. Place the notebook display away from bright light sources or reduce the light intensity from windows by using blinds. Glare on the notebook display may cause eye strain, eye fatigue or headaches.
- ❖ Certain notebook displays have a brightness approaching that of a TV device. We recommend that you adjust the brightness of your notebook display to a comfortable level to prevent possible eye strain.
- ❖ Keep your head level, facing forward and balanced over your torso.
- ❖ Adjust the font size of text on your screen to make viewing comfortable.
- ❖ Rest your eyes periodically by focusing on objects that are farther away.

### **Using the notebook with an external keyboard, mouse or monitor**

*(Sample Illustration) Correct posture*

- ❖ When using a notebook for long hours, it may be more comfortable to dock the notebook and use an external keyboard, mouse and monitor.
- ❖ The keyboard and mouse (or trackball) should be close to your elbow level.
- ❖ The mouse should be next to the keyboard to avoid a reach. If you have to reach, the arm should be supported in the forearm area by the desk surface or the chair arm supports.
- ❖ Alternative keyboards, such as the split curved keyboard, may improve shoulder and arm comfort.
- ❖ Select a mouse that is comfortable for you to use.
- ❖ Don't rest your wrists on the edge of the keyboard or on the work surface when typing.
- ❖ The monitor should be about an arm length away while sitting back in the chair.
- ❖ The monitor should be centered in front of your body.
- ❖ The top of the monitor should be at or slightly below eye level. A monitor that is too high or too low can cause awkward head and neck postures and may lead to discomfort in the neck muscles.
- ❖ If you use bifocals you may need to lower the monitor. Alternatively, you might consider customized prescription computer glasses.

## **Typing style**

- ❖ Learn to touch type so that you don't have to look down at the keyboard.
- ❖ Type with straight wrists.
- ❖ Type lightly.
- ❖ Learn the keyboard shortcuts for your applications. You will be more productive.
- ❖ Use the pointing device (e.g., touch pad, Accupoint®, or tablet pen whichever is available with your notebook computer, or other optional pointing devices like mouse or trackball) with a comfortable hand posture. Avoid awkward hand postures or high gripping force.
- ❖ It is helpful to change the type of pointing device that you use on a regular basis to avoid working in just one hand posture.

### **Taking breaks and varying tasks**

- ❖ Change the way you work so that you are not stuck in the same posture for long periods of time. Some people find it comfortable to occasionally stand while using the notebook. To do this properly, the notebook needs to be on an elevated surface. Make sure you follow the Good Working Posture points mentioned above while working.
- ❖ Take short, strategically spaced rest breaks to avoid eye strain and body fatigue. For example, stand up and walk around or stretch for a few minutes every hour.
- ❖ Taking regular breaks is especially important if you are working long hours on your computer or working on a deadline.
- ❖ If stress at work is affecting your health, try to identify the sources of the stress and evaluate ways to reduce the stress.

### **Mobile computing tips**

- ❖ When using the notebook at airports, on airplanes or trains, or at meetings, make sure that you take the time to consider the points just mentioned.
- ❖ When working on the road it may be difficult to set up the notebook in an optimal position. In these situations it is important that you take frequent breaks and change your posture frequently to relieve the excess loads on your body.
- ❖ Be creative, when in a hotel room, use a rolled up blanket or pillows to provide back support, or to provide arm support. To position the computer at a good height, remember to operate the computer on a hard flat stable surface. Using your computer on a carpet, blanket or other soft materials can block the air vents including those located at the base of the computer and possibly cause overheating of your computer.

### **Transporting the notebook**

Although your notebook is light, carrying it for a long time may lead to shoulder and arm fatigue. If you carry your notebook with other items, consider using an ergonomically-designed computer case.

## **Seeking additional help**

Follow the advice from your employer's company health and safety staff. Contact them if you need assistance making adjustment to your workstation or adjusting the lighting.

Again, if you experience persistent or recurrent pain, ache, numbness, burning, or stiffness you should promptly see a qualified health care provider. These sensations may be caused by serious medical conditions that can be treated.

For more specific recommendations on the safety and comfort of your computer environment, customers in the United States may visit the United States Department of Labor, Occupational Safety & Health Administration Web site at:

<http://www.osha.gov/SLTC/etools/computerworkstations/>

## **Check list**

- ☐ Is your chair comfortable - does it support your back and arms well?
- ☐ Are your feet flat on the ground?
- ☐ Is there adequate space under your desk for your legs?
- ☐ Are the keyboard and mouse at elbow level?
- ☐ Are your shoulders relaxed when using the keyboard?
- ☐ Are your shoulders relaxed when using a mouse or other optional pointing device?
- ☐ Are your hands and wrists aligned in a comfortable, straight posture?
- ☐ Are your arms supported in the forearm area (not at the wrist)?
- ☐ Do you hold the mouse or trackball with a loose, relaxed hand?
- ☐ Do you use a light touch when typing or using the mouse?
- ☐ Do you clean your mouse or trackball regularly?
- ☐ Is the top of your monitor close to eye level?
- ☐ Is the monitor about an arm length away?
- ☐ Have you eliminated the glare on the monitor?
- ☐ Is the monitor tilted so that it is easy to read?
- ☐ Do you change postures regularly?
- ☐ Do you take breaks, at least once an hour?

## Precautions

Your computer is designed to provide optimum safety and ease of use, and to withstand the rigors of travel. You should observe certain precautions to further reduce the risk of personal injury or damage to the computer.

- ❖ Avoid prolonged physical contact with the underside or surface of the computer.

---

### **⚠ WARNING**

Never allow any liquids to spill into any part of your computer, and never expose the computer to rain, water, seawater or moisture. Exposure to liquid or moisture can cause electric shock or fire, resulting in damage or serious injury. If any of these eventualities should accidentally occur, immediately:

1. Turn off the computer.
2. Disconnect the AC adaptor from the power plug socket and computer.

Failure to follow these instructions could result in serious injury or permanent damage to the computer.

Do not turn on the power again until you have taken the computer to an authorized service center.

---

---

### **⚠ CAUTION**

- ❖ Avoid prolonged physical contact with the underside or surface of the computer.
  - ❖ Computer base and palm rest can become hot! Avoid prolonged contact to prevent heat injury to skin.
- 

Today's performance computers generate heat under normal operating conditions, as a function of system activity. Avoid extended contact between the computer base or palm rest and your skin. Under certain operating conditions such prolonged contact between the computer base or palm rest and your skin may result in skin irritation and/or heat injury.

---

Consider using a hard computer insulating pad or similarly suitable hard insulating material when using a computer on your lap.

---

**CAUTION**

Never place a heavy object on the computer and be careful not to drop a heavy object onto the computer. It could damage the computer or cause system failure.

---

- ❖ Never turn off the computer if a drive light indicates a drive is active.

Turning off the computer while it is reading from or writing to a disk/disc or flash media may damage the disk/disc or flash media, the drive, or both.

- ❖ Keep the computer and disks away from objects that generate strong magnetic fields, such as large stereo speakers.

Information on some disks is stored magnetically. Placing a magnet too close to a disk can erase important files.

---

**CAUTION**

Handle discs carefully. Avoid touching the surface of the disc. Grasp it by its center hole and edge. If you handle the disc incorrectly, you could damage the disc and possibly lose data.

---

- ❖ Scan all new files for viruses.

This precaution is especially important for files you receive via email or download from the Internet. Occasionally, even new programs you buy from a supplier may contain a computer virus. You need a special program to check for viruses.

---

## Important information on your computer's cooling fan

Your computer may have a CPU cooling fan that cools the CPU by drawing outside air into the computer.

---

### **⚠ WARNING**

Always make sure your computer and AC adaptor have adequate ventilation and are protected from overheating when the power is turned on or when an AC adaptor is connected to a power outlet (even if your computer is in Sleep mode). In this condition, observe the following:

- ❖ Never cover your computer or AC adaptor with any object.
- ❖ Never place your computer or AC adaptor near a heat source, such as an electric blanket or heater.
- ❖ Never cover or block the air vents including those located at the underside of the computer.
- ❖ Always operate your computer on a hard flat surface. Using your computer on a carpet or other soft material can block the vents located at the underside of the computer.

Overheating your computer or AC adaptor could cause system failure, computer or AC adaptor damage or a fire, possibly resulting in serious injury.

---

### **NOTE**

The cooling fan location will vary depending on the computer.

---

## Setting up your computer

**TECHNICAL NOTE:** You must complete all setup steps up to and including [“Setting up your software” on page 43](#) before adding external or internal components to your computer. These components include, but are not limited to, a mouse, keyboard, and printer.

---

Your computer contains a rechargeable main battery that needs to be charged before you can use it.

To use external power or to charge the battery you must attach the AC adaptor. See [“Connecting to a power source” on page 39](#).

---

**NOTE** Please handle your computer carefully to avoid scratching or damaging the surface.

---

## Connecting to a power source

Your computer requires power to operate. Use the power cord/cable and AC adaptor to connect the computer to a live electrical outlet, or to charge the computer's battery.

---

**⚠ WARNING** Never pull on a power cord/cable to remove a plug from a socket. Always grasp the plug directly. Failure to follow this instruction may damage the cord/cable, and/or result in a fire or electric shock, possibly resulting in serious injury.

---

---

**⚠ WARNING** Always confirm that the power plug (and extension cable plug if used) has been fully inserted into the socket, to ensure a secure electrical connection. Failure to do so may result in a fire or electric shock, possibly resulting in serious injury.

Be careful if you use a multiple connector. An overload on one socket could cause a fire or electric shock, possibly resulting in serious injury.

---

---

**⚠ WARNING** Always use the TOSHIBA AC adaptor that was provided with your computer, or use AC adaptors specified by TOSHIBA to avoid any risk of fire or other damage to the computer. Use of an incompatible AC adaptor could cause fire or damage to the computer possibly resulting in serious injury. TOSHIBA assumes no liability for any damage caused by use of an incompatible adaptor.

---

*(Sample Illustration) Power cord/cable and AC adaptor*

To connect AC power to the computer:

- 1 Connect the power cord/cable to the AC adaptor.

*(Sample Illustration) Connecting the power cord/cable to the AC adaptor*

**⚠ WARNING**

Handling the cord on this product will expose you to lead, a chemical known to the State of California to cause birth defects or other reproductive harm.

***Wash hands after handling.***

- 2 Plug the AC adaptor cord into the DC-IN on the side of the computer.

*(Sample Illustration) Connecting the AC adaptor cord to the computer*

**NOTE**

To locate your DC-IN port, please refer to your Quick Start document.

- 
-  3 Connect the power cord/cable to a live electrical outlet.  
The AC power light on the indicator panel glows white.
- 

**⚠ WARNING** Never attempt to connect or disconnect a power plug with wet hands. Failure to follow this instruction could result in an electric shock, possibly resulting in serious injury.

---

The computer's main battery light gives you an indication of the main battery's current charge:

- ❖ Glows amber while the main battery is being charged (AC adaptor connected)
  - ❖ Glows white when the main battery is fully charged
  - ❖ Is unlit when the battery is not charging, or the AC adaptor is not plugged into the computer or AC outlet
  - ❖ Flashes amber when the main battery charge is low and it is time to recharge the main battery or plug in the AC adaptor
- 

**NOTE** If the AC power light flashes amber during charging, either the main battery is malfunctioning, or it is not receiving correct input from the AC power supply.

---

## Charging the main battery

---

**NOTE** The computer's battery is not accessible by the user.

---

Before using the battery to power the computer, you must charge the battery.

To charge the battery, leave the computer plugged into an AC power source with the computer turned off until the battery light glows white. After that, the battery will be completely charged and ready to power the computer.

---

**NOTE** Battery life and charge time may vary depending on the applications power management settings, and features used.

---

## Using the computer for the first time

The computer is now ready for you to turn it on and begin using it, see [“Exploring Your Computer’s Features” on page 90](#).

---

**NOTE**

When opening or closing the display panel, place one hand on the palm rest to hold the computer in place and use the other hand to slowly open or close the display panel.

---

---

**CAUTION**

To avoid damaging the display panel, do not force it beyond the point where it moves easily and never lift the computer by the display panel.

Do not press or push on the display panel and be careful to remove any pens or other objects from the keyboard area before closing the display panel.

---

Small bright dots may appear on your screen display when you turn on your computer. Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. Any small bright dots that may appear on your display are an intrinsic characteristic of the TFT manufacturing technology. Over a period of time, and depending on the usage of the computer, the brightness of the screen will deteriorate. This is also an intrinsic characteristic of the screen technology. When the computer is operated on battery power, the screen will dim and you may not be able to increase the brightness of the screen while on battery power.

## Initial setup

The Startup screen is the first screen displayed when you turn on your computer for the first time. Follow the on-screen instructions on each screen in order to properly install the operating system and begin using your computer.

---

## Setting up your software

---

**CAUTION**

When you turn on the computer for the first time, do not turn off the power again until the operating system has loaded completely.

---

**NOTE**

The names of windows displayed, and the order in which windows appear, may vary according to your software setup choices.

---

The first time you turn on your computer, the setup guides you through steps to set up your software. Follow the on-screen instructions.

## Registering your computer with Toshiba

Product registration is strongly recommended, and allows Toshiba to send you periodic updates, announcements, and special offers applicable to your Product. Product registration can be completed by one of three methods:

- 1 From the Toshiba Web site at [register.toshiba.com](http://register.toshiba.com): Type in the requested information and complete the registration process.
- 2 From the Start screen: Type **Registration** while in the Start screen, locate and complete the registration process.
- 3 From the Desktop: Move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear, click or touch the **Search** (🔍) charm and, in the Search field, type **Registration**. In the list that appears, click or touch **Registration** and complete the registration process.

Failure to complete Product Registration will not diminish your rights under the Toshiba Standard Limited Warranty.

**NOTE**

To register online, an Internet connection is required.

---

## To Shut down your computer

- 1 From the Start or Desktop screen, move your pointer to the upper-right corner of the screen or swipe in from the right edge.
- 2 When the Windows® charms appear, click or touch the **Settings** (⚙️) charm.

**CAUTION**

Pressing the power button before shutting down the Windows® operating system could cause you to lose your work. Make sure the system indicator panel's storage drive light and the drive in-use light are off. If you turn off the power while a disk/disc is being accessed, you may lose data or damage the disk/disc and/or drive.

- 3 In the lower right of the screen click or touch the **Power** (🔌) icon.

*(Sample Image) Shut down*

**NOTE**

To perform a Hybrid shut down, (instead of performing a Shut down), click or touch the **Shut down** option but do NOT hold the Shift key.

- 4 Highlight **Shut down** while holding the Shift key, and then click or touch the **Shut down** option.  
The computer closes all open applications, shuts down the operating system, and then turns off.

## To Restart your computer

- 1 From the Start or Desktop screen, move your pointer to the upper-right corner of the screen or swipe in from the right edge.
- 2 When the Windows® charms appear, click or touch the **Settings** (⚙️) charm.
- 3 In the lower right of the screen click or touch the **Power** (🔌) icon.

*(Sample Image) Restart*

- 4 Highlight **Restart**, and then click or touch the **Restart** option.  
The computer closes all open applications, and restarts the operating system.

## To place your computer in Sleep mode

- 1 From the Start or Desktop screen, move your pointer to the upper-right corner of the screen or swipe in from the right edge.
- 2 When the Windows® charms appear, click or touch the **Settings** (⚙️) charm.

### CAUTION

If you power down using the Sleep command and the battery discharges fully, your unsaved information will be lost. Be sure to save your work first.

- 3 In the lower right of the screen click or touch the **Power** (⏻) icon.

*(Sample Image) Sleep*

- 4 Highlight **Sleep**, and then click or touch the **Sleep** option.

Sleep mode saves the current state of the computer to memory so that, when you restart the computer, you can continue working from where you left off.

## Adding optional external devices

### NOTE

Before adding external devices, Toshiba recommends setting up your software. See [“Setting up your software” on page 43](#).

After starting your computer for the first time you may want to:

- ❖ Add more memory (see [“Adding memory” on page 46](#))
- ❖ Connect external devices (see [“Connecting an external device” on page 62](#))
- ❖ Connect an external monitor (see [“Using external display devices” on page 63](#))

## Adding memory

Your computer comes with enough memory to run most of today's popular applications. Toshiba will not be responsible for any product damage, data loss, service or part replacement made necessary by improper installation of a memory module.

## Recovering the Internal Storage Drive

**NOTE** To purchase an optional external writable optical disc drive, visit the Toshiba Web site at [accessories.toshiba.com](http://accessories.toshiba.com).

Your computer includes recovery utilities to allow you to recover your internal storage drive if necessary.

The following internal storage drive recovery options are available:

<b>Recovery option</b>	<b>Description</b>
Creating recovery media	This option allows you to create the recovery media you will use to restore your computer. See <a href="#">“Creating recovery media” on page 48</a> .
Restoring from recovery media	This option allows you to restore your system from the recovery media you created. See <a href="#">“Restoring from recovery media” on page 50</a> .
Refresh your PC (with user’s data)	This option allows you to refresh your system without losing your data. See <a href="#">“Refresh your PC (with user’s data)” on page 52</a> .
Reset your PC	This option allows you to remove all data from your system and reinstall Windows®. See <a href="#">“Reset your PC” on page 54</a> .

A recovery image of your computer is stored on the internal storage drive, and the image can be restored by running the recovery utilities directly from your internal storage drive as described in the sections below. However, it is strongly recommended that you create recovery media. If the recovery files on your internal storage drive become corrupted or are deleted, you can restore your system from your recovery media. Also, if your original internal storage drive fails, you can restore your system to a new internal storage drive from your recovery media. It is strongly recommended that you create recovery media before using your system for the first time. See [“Creating recovery media” on page 48](#) and [“Restoring from recovery media” on page 50](#).

**NOTE**

- ❖ During the recovery process your computer must be connected to an external power source via the AC adaptor.
  - ❖ When you restore your system, only the operating system files and drivers originally shipped with the computer are restored. Any files that you created are not restored during this process. Be sure to separately save the files you have created to external media using Windows® or another backup program. For more information, see [“Backing up your work” on page 76](#).
- 

## Creating recovery media

It is strongly recommended that you create recovery media. If the recovery files on your internal storage drive become corrupted or are deleted, you can restore your system from your recovery media. Also, if your original internal storage drive fails, you can restore your system to a new internal storage drive from your recovery media.

**NOTE**

During the recovery process your computer must be connected to an external power source via the AC adaptor.

---

**NOTE**

When you create recovery media, only the operating system files and drivers originally shipped with the computer are backed up to the external media and can be restored from this media. Any files that you created are not backed up on the recovery media. You will need to separately back up the files you created; for more information, see [“Backing up your work” on page 76](#).

---

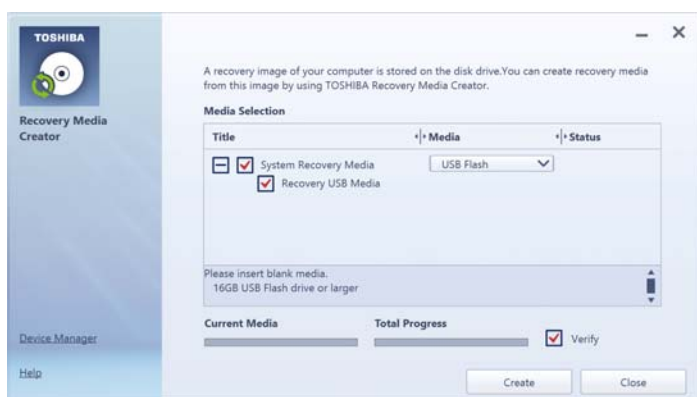

When you create recovery media, the system will prompt you to insert several blank DVDs or connect one or more USB flash drives of a certain minimum capacity to your computer. The amount of space required for storing the recovery files varies by computer model. Follow the procedure below to determine how much space you will need for storing your system's recovery files.

To create recovery media:

- 1 From the Start screen begin typing **Recovery Media Creator** and click or touch your selection. If you are in the Desktop, move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear click or touch the **Search** (magnifying glass) charm and, in the Search field, type **Recovery Media Creator**. In the list that appears, click or touch your selection.

The TOSHIBA Recovery Media Creator dialog box displays.

(Sample Image) TOSHIBA Recovery Media Creator dialog box

**NOTE** An optional external writable optical disc drive must be connected to your computer in order for the DVD option to display in the dialog box.

- 2 Select **DVD** or **USB Flash** from the drop-down list, depending on the type of external media you want to use.
- 3 Check the “Information” area of the dialog box to determine the number of DVDs you will need and/or the minimum amount of storage space required for copying your system’s recovery files to USB flash drive(s).
- 4 Do one of the following:
  - ❖ If you are copying files to DVD, insert a blank DVD into the optional external writable optical disc drive.

- 
- ❖ If you are copying files to a USB flash drive, connect a USB flash drive of the required minimum capacity (as specified in the TOSHIBA Recovery Media Creator utility) to your computer.
- 

**CAUTION**

All information stored on your DVDs or USB flash drive(s) will be erased during the process of creating the recovery media. Be sure to save the information stored on your external media to another storage device before executing this procedure, or use blank media.

---

- 5 Click or touch the **Create** button in the TOSHIBA Recovery Media Creator utility dialog box.
  - 6 Follow the on-screen prompts to complete the copy process.
- 

**NOTE**

If you are copying the recovery files to DVDs, be sure to label each DVD in the set sequentially (for example, “1 of 3,” “2 of 3,” etc.), so that you will know in which order to insert the discs during recovery.

---

For information on using the Recovery media you have created with the preceding steps, see [“Restoring from recovery media” on page 50](#).

## Restoring from recovery media

---

**CAUTION**

The recovery process deletes information stored on the internal storage drive. Be sure to save your work to external media before executing the recovery (see [“Backing up your work” on page 76](#)).

---

**NOTE**

During the recovery process your computer must be connected to an external power source via the AC adaptor.

---

If you have created recovery media for your system, you can restore your system from such media, if necessary. For example, if your original internal storage drive fails, you can restore your system to a new internal storage drive from your recovery media. For instructions on creating recovery media, see [“Creating recovery media” on page 48](#).

**NOTE**

When you restore your system, only the operating system files and drivers originally shipped with the computer are restored. Any files that you created are not restored during this process. Be sure to separately save the files you have created to external media using Windows® or another backup program. For more information, see [“Backing up your work” on page 76](#).

To recover your internal storage drive from recovery media:

- 1 Make sure your computer is turned off.
- 2 Do one of the following:
  - ❖ If your recovery files are on DVDs, insert the first recovery DVD into your optional external writable optical disc drive.
  - ❖ If your recovery files are on a USB flash drive, connect the USB flash drive to your computer.
- 3 Turn on your computer while pressing the F12 key on your keyboard.

The Boot menu displays.
- 4 Using the arrow keys, select the **DVD** option or the **USB Flash** option, depending on which type of media you are using, and then press the ENTER key.
- 5 A warning screen appears, stating that when the recovery is executed all data on your internal storage drive will be deleted and rewritten. Click or touch **Yes** to continue.
- 6 Follow the on-screen instructions to complete the recovery process.

When the process is complete, a message displays indicating that the drive has been recovered.
- 7 Click or touch **Finish** to restart the computer.

## Refresh your PC (with user's data)

---

**CAUTION**

Using “Refresh your PC” recovers your Windows® installation to an earlier state while attempting to keep your data and apps you installed from the Windows® Store. Your PC settings and any Desktop Applications installed from media or websites will be deleted. Toshiba does not guarantee that your data will not be deleted during the Refresh process. Please make a back up of your data to external media before executing this process. For more information, see [“Backing up your work” on page 76](#).

---

**NOTE**

During the recovery process your computer must be connected to an external power source via the AC adaptor.

---

You can recover the factory default software (refresh your PC), while the computer will attempt to back up your data using the utilities stored on your computer's internal storage drive:

---

**TECHNICAL NOTE:** Your data will be copied into the backup folder. All of the data will be moved to this folder during the recovery process, however the current directory structure will be retained.

---

- 1 From the Start or Desktop screen, move your pointer to the upper-right corner of the screen or swipe in from the right edge.
- 2 When the Windows® charms appear click or touch the **Settings**  charm.

3 Click or touch **Change PC Settings**.

The PC settings window appears.

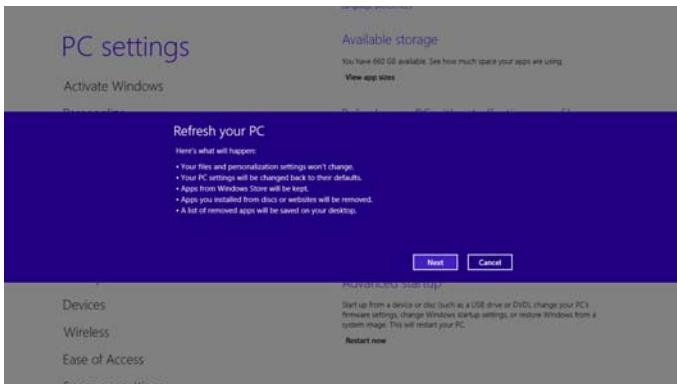

*(Sample Image) PC settings screen*

4 Click or touch **Update and recovery**.

5 Click or touch **Recovery**.

6 Select **Refresh your PC without affecting your files**, and click or touch **Get Started**.

The “Refresh your PC” screen appears.

*(Sample Image) Refresh your PC screen*

**CAUTION**

Toshiba does not guarantee successful data back up. Be sure to save your work to external media before executing the recovery (see “[Backing up your work](#)” on page 76).

- Click or touch the **Next** button to begin.  
The “Ready to refresh your PC” screen appears.

*(Sample Image) Ready to refresh your PC screen*

You will be prompted to refresh your system.

- Click or touch the **Refresh** button.
- Your system will restart.

The “Refreshing your PC” window appears. When the process is complete your system will reboot your Windows® operating system.

## Using the TOSHIBA Dual Pointing Device

*(Sample Illustration) TOSHIBA Dual Pointing Device buttons*

**AccuPoint® II pointing device**— Moves the cursor and selects items on the screen.

To move the cursor, gently push the pointing device in the direction you want the cursor to move. Pushing harder on the pointing device moves the cursor faster.

**AccuPoint® II Primary button**— Performs the same function as the left button on a mouse.

When a step instructs you to click or choose an item, move the cursor to the item, then press and release the primary button. To double-click, press the primary button twice in rapid succession.

**AccuPoint® II Secondary button**— Performs the same function as the right button on a mouse.

For more information, see [“Disabling or enabling the touch pad” on page 150](#).

### NOTE

The touch pad ON/OFF button applies only to the touch pad and not to the AccuPoint® II pointing device.

## Using the touch pad

**NOTE** Some of the touch pad operations described in this section are only supported in certain applications, and only on certain models.

You can use the touch pad (the small, touch-sensitive area in front of the keyboard) and the adjacent control buttons to:

- ❖ Move the pointer on the screen
- ❖ Select an item on the screen
- ❖ Open or activate an item on the screen
- ❖ Scroll through a document or information
- ❖ Zoom in for a close-up view
- ❖ Zoom out to see more information at once

*(Sample Illustration) The touch pad and associated control buttons*

Refer to the table below for specific instructions on performing each operation.

**NOTE** The *pointer* is the icon (usually an arrow) that moves on the screen when you slide your finger across the touch pad or move a mouse connected to your computer.

<b>To:</b>	<b>Do the following:</b>	<b>Example:</b>
Move the on-screen pointer	<p>Slide your finger across the touch pad in the direction you want to move the pointer.</p> <p>To move the pointer a longer distance, slide your finger several times across the touch pad in the preferred direction.</p>	 <p><i>(Sample Illustration) Pointer moves to the right</i></p>

## Adjusting touch pad settings

While you are typing, the on-screen pointer may seem to move or jump around “by itself” to random locations on the screen. The on-screen pointer may also seem to automatically select text, click buttons, and activate other user interface elements. For help with these problems, try one or more of the following:

- ❖ Try adjusting your typing technique to avoid accidental contact with the touch pad. You may be inadvertently brushing the touch pad with the heel of your hand as you type. Also, accidental light touches or taps on the touch pad may select an item or text on the screen, and potentially the item or text may be replaced by the next character you type.
- ❖ Temporarily disable the touch pad, so that it does not respond to touch or button presses while you type. See [“Disabling or enabling the touch pad” on page 62](#).
- ❖ Adjust the sensitivity of the touch pad, so that it is less responsive to accidental light taps and lighter finger pressure.

---

### NOTE

Touch pad setting options vary by computer model. The touch pad settings are accessible through the Mouse Properties option of the Windows Control Panel. For more information, please visit [support.toshiba.com](http://support.toshiba.com).

---

## Disabling or enabling the touch pad

The touch pad is enabled by default. To enable/disable the touch pad, press Fn + F9. For more information, see [“Disabling or enabling the touch pad” on page 150](#).

## Connecting an external device

---

### NOTE

Depending on your system, some models may include USB 3.0 port(s). To distinguish these ports, please look for the blue inset within the USB 3.0 port (if available).

---

You can easily attach an external device your computer.

To do this:

- 1 Read the directions that came with the device to see if you first need to install new software.

- 2 Connect the device's video or USB cable to the port on the computer and to the device.
- 3 Connect the device's power cable to a live electrical outlet (if applicable).
- 4 Turn on the external device (if applicable).

Your computer may automatically detect the external device.

## Using external display devices

Your computer comes with a built-in display, however you can also connect the following types of external display devices to the video ports described below:

**NOTE** To locate your HDMI™ port\* and RGB (monitor) port\* please refer to your Quick Start document.

- ❖ An HDMI™-compatible television or external display device via the HDMI™ Out port\*
- ❖ An external monitor or projector via the RGB (monitor) port\*

\*Available on certain models

*(Sample Illustration) Video ports on left side of computer*

## Selecting video cables

To connect a device to the HDMI™ Out port, you must purchase an HDMI™ cable.

## Connecting an HDMI™-compatible television or display device

To connect an HDMI™-compatible television or display device to the computer:

- ❖ Connect one end of an HDMI™ cable (not included with your computer) to the HDMI™ Out port on the side of your computer, and then connect the other end of the cable to your television or display device. Refer to the

manual that came with the television or display device for more information.

Your computer should automatically detect the external display device.

## Connecting an external monitor or projector

You can easily attach an external monitor or projector to your computer if you need a larger screen.

To do this:

- 1 Read the directions that came with the monitor to see if you first need to install new software.
- 2 Connect the monitor's video cable to the RGB (monitor) port on the side of the computer.
- 3 Connect the device's power cable to a live electrical outlet.
- 4 Turn on the external device.

Your computer will automatically detect the external display device.

---

### NOTE

You can change the display settings by pressing the (Fn) + P keys, or by configuring the display properties settings.

---

## Directing the display output when you turn on the computer

Once you have connected an external display device, you can choose to use the internal display only, the external device only, or both simultaneously.

---

### NOTE

Some modes are only available with the appropriate device attached and turned on.

---

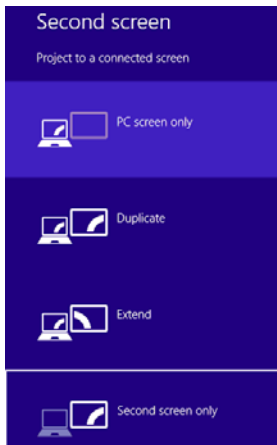

The quickest way to change the display output settings is to use the (Fn) + P keys:

Press the (Fn) + P keys repeatedly until the setting you want takes effect. Briefly pause each time you press the (Fn) + P keys to allow time for the display to change.

This cycles through the settings in the following order (the last two options are available if an external monitor is connected):

- ❖ PC screen only
- ❖ Duplicate
- ❖ Extend
- ❖ Second screen only

*(Sample Image) Display options window*

**NOTE** The (Fn) + P keys navigate through the options without activating a selection. Press ENTER to activate a selection.

**NOTE** You may also use the Fn + F5 key, and then press ENTER to activate a selection.

## Adjusting the quality of the external display

To obtain the best picture quality from your television (or other video display device), you may need to adjust the video settings. See the video device documentation for additional configuration steps.

## Customizing your computer's settings

There are several ways in which you can customize your computer to suit your particular requirements. You can go into your computer settings to make adjustments to your computer to suit your needs.

From the Start or Desktop screen, move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear, click or touch the **Settings** (⚙️) charm, and then click or touch **Change PC Settings**. Then choose a category you wish to change. Refer to your operating system documentation or Help and Support for details.

You may also wish to customize your power usage settings. For more information, see [“Power Plans” on page 85](#). There are additional custom settings you can choose. See [“Utilities” on page 102](#).

## Caring for your computer

This section gives tips on cleaning and moving your computer. For information about taking care of your computer's battery, see [“Taking care of your battery” on page 87](#).

---

### NOTE

Please handle your computer carefully to avoid scratching or damaging the surface.

---

## Cleaning the computer

---

### CAUTION

Keep liquids, including cleaning fluid, out of the computer's keyboard, speaker, and other openings. Never spray cleaner directly onto the computer and/or display. Never use harsh or caustic chemical products to clean the computer.

---

To keep your computer clean, gently wipe the display panel and exterior case with a lightly dampened cloth.

## Moving the computer

Before moving your computer, even across the room, make sure all drive activity has ended (the internal storage drive indicator light stops glowing) and all external peripheral cables are disconnected.

---

**CAUTION**

Do not pick up the computer by its display panel or by the back. Doing so could damage the system.

---

# Chapter 2

## Learning the Basics

---

This chapter gives some computing tips and provides important information about basic features.

### Computing tips

- ❖ Save your work frequently.

Your work stays in the computer's temporary memory until you save it to the internal storage drive. If the network you are using goes down and you must restart your computer to reconnect, or your battery runs out of charge while you are working, you will lose all work since you last saved.

See [“Saving your work” on page 75](#) for further information.

**HINT:** Some programs have an automatic save feature that can be activated. This feature saves your file to the internal storage drive at preset intervals. See your software documentation for details.

---

- ❖ Back up your files to external media on a regular basis. Label the backup copies clearly and store them in a safe place.

It is easy to put off backing up because it takes time. However, if your internal storage drive suddenly fails, you will lose all the data on it unless you have a separate backup copy. For more information, see [“Data and system configuration backup in the Windows® operating system”](#) on page 139.

- ❖ Use Error-checking and Disk Defragmenter regularly to check and optimize disk space and improve performance.
- ❖ Scan all new files for viruses.

This precaution is especially important for files you receive via external media, email, or download from the Internet.

- ❖ Take frequent breaks to avoid repetitive-motion injuries and eyestrain.
- ❖ Do not turn off the computer if a drive indicator light indicates a drive is active.

Turning off the computer while it is reading from or writing to a disk may damage the disk, the drive, or both.

## NOTE

The Windows® operating system records information, such as your desktop setup, during its shutdown procedure. If you do not let the Windows® operating system shut down normally, details such as new icon positions may be lost.

## Using the keyboard

Your computer’s keyboard contains character keys, control keys, function keys, and special Windows® keys.

*(Sample Illustration) Keyboard*

*(Sample Illustration) 10-key keyboard*

### NOTE

To capture a print screen of the entire screen, press the Fn + PRTSC key. (This only applies to models with a 10-key keypad.)

To capture only the active window displayed, press Fn + ALT while simultaneously pressing the PRTSC key.

*(Sample Illustration) PRTSC key on the 10-key keyboard*

## Function keys

The function keys (not to be confused with the Fn key) are the 12 keys at the top of the keyboard.

*(Sample Illustration) Function keys*

F1 through F12 are called function keys because they execute programmed functions when pressed. Used in combination with the Fn key, function keys marked with icons execute specific functions on the computer. For example, Fn + F9 turns the touch pad ON/OFF. For more information, see “TOSHIBA Function Keys” on page 147.

## Special Windows® keys

*(Sample Illustration) Special Windows® keys*

Your computer's keyboard has one key and one button that have special functions in Windows®:

- ❖ **Windows® key**—Toggles between the Desktop screen and the last app opened on the Start screen. For more information refer to Help & Support, or see [“Exploring the Start screen” on page 90](#)
- ❖ **Application key**—Has a similar function as the secondary mouse button

## Overlay keys

The keys with gray numbers and symbols on the front of them form the numeric and cursor overlay. This overlay lets you enter numeric data or control the cursor as you would using the 10-key keypad on a desktop computer's keyboard.

*(Sample Illustration) Numeric and cursor control overlay*

## Using the overlay to type numeric data

The keys with the numbers on their right front are the numeric overlay keys.

To turn the numeric overlay on, press Fn and F11 simultaneously. The numeric overlay light glows when the numeric overlay is on.

To disable the numeric overlay, hold down the Fn key and press F11 again. The numeric overlay light goes out.

## Using the overlay for cursor control

The keys with the gray arrows and symbols on their left front are the cursor control overlay keys.

To turn the cursor control overlay on, press Fn and F10 simultaneously. The cursor control overlay light glows when the cursor control overlay is on.

To disable the cursor control overlay, hold down the Fn key and press F10 again. The cursor control overlay light goes out.

## Backlit keyboard

**(Available on certain models.)**

Your keyboard may have a backlight illumination feature. If the keyboard backlight setting is set to Auto, the backlight turns on when you type on the keyboard and turns off after a certain interval when you stop typing. You can modify the time-out interval or change the keyboard backlight setting to always on or always off.

## Touch screen

**(Available on certain models.)**

Your computer may come with a touch screen, enabling direct interaction with displayed apps and programs through simple or multi-touch gestures.

## Touch screen navigation

Use your finger to manipulate the on-screen icons, buttons, menu items, and other items on the touch screen. You can also change the screen's orientation.

**⚠ CAUTION** The screen is made of glass so avoid contact with sharp, rough, or abrasive objects or substances as screen may break or scratch if not handled properly. If you see a crack in the glass, discontinue use of the device to avoid injury.

**Touch**—Touch to activate items displayed on the screen, such as app and setting icons or on-screen buttons. Touch to type using the keyboard.

**Touch & hold**—Touch and hold an item on the screen by touching and holding the item in place until an action occurs.

**Drag**—Touch and hold an item for a moment and then, without lifting your finger, move the item until you reach the target position. For example, drag items on any app screen to reposition them.

**Swipe or slide**—To swipe or slide, quickly move your finger across the surface of the screen without pausing. For example, swipe your finger to the left from the right edge of the screen to display the Windows® charms.

**Double-tap**—Tap quickly twice to zoom in. For example, double-tap a section of a Web page to zoom in on that section. Double-tap again to zoom out.

**Pinch**—In some apps (such as Maps and Games), you can zoom in and out by placing two fingers on the screen at once and pinching them together (to zoom out) or spreading them apart (to zoom in).

**Rotate**—Place two or more fingers on an item and rotate your hand. The item rotates in the direction you turn your hand. (Not functional in all apps).

## Mouse properties

Mouse properties allow you to change your pointing device or mouse settings.

To access Mouse properties:

- 1 Move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear click or touch the **Search** (🔍) charm, click or touch **Settings** and, in the Search field, type **Mouse**. In the list that appears, click or touch your selection.

The Mouse screen appears.

- 2 Adjust the settings as desired, and then click or touch **OK**.

## Starting an app

To Start an app on the Start screen, move your pointer over the appropriate tile and click or touch to open.

To Start an app from the Desktop, move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms slide out from the right, click or touch the **Start** (📌) charm.

## Starting an app from the Start screen

To Start an app on the Start screen, move your pointer over the appropriate tile and click or touch to open, or swipe your finger to the left from the right edge of the screen.

To Start an app using the Search function, move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms slide out from the right, click or touch the **Search** (🔍) charm. The apps screen appears with the available system apps to choose from or you can enter your search in the search field.

Below is an example using the Search field to start an app:

- 1 Move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear click or touch the **Search** (🔍) charm.

*(Sample Image) Searching for apps*

- 2 Start typing the app's name in the Search field.  
As you type, all matching files and apps are displayed.
- 3 Click or touch the app you wish to open.

## Saving your work

Before you turn off the computer using the Shut down command, save your work on the internal storage drive, external media, flash media, or optical disc. This is one of the most important rules of computing.

Many applications offer a feature that saves documents at regular intervals. Check your program's documentation to see if it has an automatic save feature.

## Backing up your work

Back up all the files you create in case something happens to your computer. You can back up your files to different types of media such as CDs, DVDs, external storage media, or to a network, if available.

To back up several files at one time, use the Microsoft® Windows® file recovery program preinstalled on the computer's internal storage drive. Also see [“Backing up your data or your entire computer with the Windows® operating system” on page 141](#).

---

**HINT:** Backing up all the files on your internal storage drive may take a considerable amount of time and multiple CDs/DVDs. You may prefer to use a high-capacity file recovery system, such as an external hard drive.

---

## Toshiba's online resources

Toshiba maintains a number of online sites to which you can connect. These sites provide information about Toshiba products, give help with technical questions and keep you up to date with future upgrades. For more information, see [“Contacting Toshiba” on page 145](#).

# Chapter 3

## Mobile Computing

---

This chapter covers all aspects of using your computer while traveling.

### **Toshiba's energy-saver design**

Your computer enters a low-power suspension mode when it is not being used, thereby conserving energy and saving money in the process. It has a number of other features that enhance its energy efficiency.

Many of these energy-saving features have been preset by Toshiba. We recommend you leave these features active, allowing your computer to operate at its maximum energy efficiency, so that you can use it for longer periods while traveling.

### **Running the computer on battery power**

The computer contains a Lithium-Ion (Li-Ion) battery that provides power when you are away from an AC outlet. You can recharge it many times.

## Battery Notice

Battery life rating is for comparison purposes only, and does not indicate the battery life that will be obtained by any individual user. Actual battery life may vary considerably from specifications depending on product model, configuration, applications, power management settings and features utilized, as well as the natural performance variations produced by the design of individual components. The battery life rating is only achieved on the select models and configurations tested by Toshiba under the specific test settings at the time of publication and is not an estimate of a system's battery life under any conditions other than the specific test settings.

Recharge time varies depending on usage. Battery may not charge while the computer is consuming full power. After a period of time, the battery will lose its ability to perform at maximum capacity and will need to be replaced. This is normal for all batteries.

To ensure that the battery maintains its maximum capacity, operate the computer on battery power at least once a month. The Lithium-Ion battery has no memory effect so it is not necessary to let the battery fully discharge each time. However, for better accuracy of the battery meter, it is helpful to fully discharge the battery periodically. Please see [“Maintaining your battery” on page 88](#) for procedures. If the computer is continuously operated on AC power, either through an AC adaptor or a port replicator (if applicable to your system), for an extended period (more than a month), the battery may fail to retain a charge. This may shorten the life of the battery, and may cause the battery meter to be inaccurate.

---

**NOTE** For best performance when playing streaming media (especially streaming video), either power the computer from its AC adaptor, or set up a power plan that keeps the computer running at full performance even when powered from its battery. For more information about Windows® power plans, see [“Power Plans” on page 85](#).

---

The computer also has an internal real-time-clock (RTC) battery.

---

The RTC battery powers the RTC memory that stores your system configuration settings and the current time and date information. It maintains this information for up to a month while the computer is turned off.

---

**TECHNICAL NOTE:** Depending on your system, the RTC battery may only charge while the computer is turned on.

---

## Power management

Your computer ships with the power management options preset to a configuration that will provide the most stable operating environment and optimum system performance for both AC power and battery modes.

---

### **CAUTION**

Changes to these settings may result in system performance or stability issues. Users who are not completely familiar with the power management component of the system should use the preset configuration. For assistance with setup changes, contact Toshiba's Customer Support Center.

---

## Charging batteries

The battery needs to be charged before you can use it to power the computer.

---

### **CAUTION**

Always use the AC adaptor specified by Toshiba. You can order a Toshiba AC adaptor from Toshiba's Web site at [accessories.toshiba.com](http://accessories.toshiba.com).

---

### **NOTE**

Battery charge time may vary depending on the applications, power management settings, and features used.

---

## Charging the main battery

The battery needs to be charged before you can use it to power the computer.

To charge the main battery, plug the computer into a live electrical outlet. The battery charges whether the computer is on or off.

**TECHNICAL NOTE:** The recharging of the battery may not occur when your computer is using all of the power provided by the AC adaptor to run applications, features, and devices. Your computer's Power Options utility can be used to select a power level setting that reduces the power required for system operation and will allow the battery to recharge.

---

The battery may not start charging immediately under the following conditions:

- ❖ The battery is extremely hot or cold.  
To ensure that the battery charges to its full capacity, wait until it reaches room temperature (50 to 80 degrees Fahrenheit, 10 to 26 degrees Celsius).
  - ❖ The battery is almost completely discharged.  
Leave the power connected and the battery should begin charging after a few minutes.
- 

**HINT:** Once the battery is fully charged, we recommend that you periodically operate your computer on battery power until the battery discharges completely.

---

**CAUTION**

Please make a complete back up of your data to external media before discharging the battery. For more information, see [“Backing up your work” on page 76](#).

---

## Charging the RTC battery

Your computer has an internal real-time clock (RTC) battery. The RTC battery powers the System Time Clock and BIOS memory used to store your computer's configuration settings. When fully charged, it maintains this information for up to a month when the computer is powered off.

The RTC battery may have become completely discharged while your computer was shipped, resulting in a CMOS error message during startup. The error message may vary by computer model.

---

**NOTE** Depending on your system, the RTC battery may only charge while the computer is turned on.

---

To recharge the RTC battery, plug the computer into a live electrical outlet and leave the computer powered on for 24 hours.

---

**NOTE** It is seldom necessary to charge the RTC battery because it charges while the computer is on. If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date or stop working.

When Hibernation mode is enabled and the RTC battery is completely discharged, a warning prompts you to reset the real-time clock.

---

The computer can be used while the RTC battery is being charged, although the charging status of the RTC battery cannot be monitored.

## Monitoring battery power

The computer's main battery light gives you an indication of the main battery's current charge.

- ❖ Glows amber while the main battery is being charged (AC adaptor connected)
- ❖ Glows white when the main battery is fully charged

---

**NOTE** Battery life and charge time may vary, depending upon power management settings, applications and features used.

---

- ❖ Flashes amber when the main battery charge is low and it is time to recharge the main battery or plug in the AC adaptor

---

**NOTE** If the AC power light flashes amber during charging, either a battery pack is malfunctioning, or it is not receiving correct input from the AC power supply.

---

**HINT:** Be careful not to confuse the battery light (□)/power light (⏻), and the power button light.

When the power light or power button light flashes amber, it indicates that the system is suspended (using the Windows® operating system Sleep command).

*(Sample Illustration) Power and battery light locations*

## Determining remaining battery power

### NOTE

Wait a few moments after turning on the computer before trying to monitor the remaining battery power. The computer needs this time to check the battery's remaining capacity and perform its calculations.

Move the pointer over the power icon in the notification area, see [“Finding your way around the desktop” on page 92](#) for more information on the notification area. A pop-up message displays the remaining battery power as a percentage.

With repeated discharges and recharges, the battery's capacity gradually decreases. A frequently used older battery does not power the computer for as long as a new battery, even when both are fully charged.

**TECHNICAL NOTE:** The computer drains the battery faster at low temperatures. Check your remaining charge frequently if you are working in temperatures below 50 degrees Fahrenheit.

The computer calculates the remaining battery charge based on your current rate of power use and other factors such as the age of the battery.

## What to do when the main battery runs low

When the main battery runs low you can:

- ❖ Plug the computer into an external power source and recharge the main battery
- ❖ Save your work and turn off the computer

If you do not manage to do any of these things before the main battery completely runs out of power, the computer automatically enters Hibernation mode and turns itself off. Hibernation mode keeps track of where you were, so that when you turn on the power again, you can continue where you left off.

## Setting battery notifications

You can set two notifications. Each notification can be set to alert you when a specified percentage of remaining battery power has been reached. You can also set the computer to enter Sleep mode or Hibernation mode or to completely shut down when the notification goes off.

To change the default notification settings:

- 1 While on the desktop, click or touch the **Battery**  icon in the notification area.
- 2 Click or touch **More power options**.  
The Power Options window appears.
- 3 Click or touch **Change plan settings** under the power plan to be customized.  
The Edit Plan Settings window appears.
- 4 Click or touch **Change advanced power settings**.  
The Advanced settings tab of the Power Options window appears.

- 5 Double-click or touch **Battery** to display the battery options.

*(Sample Image) Advanced settings tab of Power Options screen*

- 6 Configure the alarm settings to suit your needs.

## Conserving battery power

How long a fully charged battery pack lasts when you are using the computer depends on a number of factors, such as:

- ❖ How the computer is configured
- ❖ How much you use the internal storage drive or other optional devices
- ❖ Where you are working, since operating time decreases at low temperatures

There are various ways in which you can conserve power and extend the operating time of your battery:

- ❖ Enable Sleep or Hibernation, which saves power when you turn off the computer and turn it back on again
- ❖ Use the Windows® power-saving option plans

These power-saving options control the way in which the computer is configured. By using them, you can increase the length of time you can use the computer before you need to recharge the battery.

Microsoft® has combined these options into preset Power Plans. Using one of these power plans lets you choose between maximum power savings and peak system performance. You may also set individual power-saving options to suit your own needs.

The following sections describe how to choose a Power Plan and discuss each power-saving option.

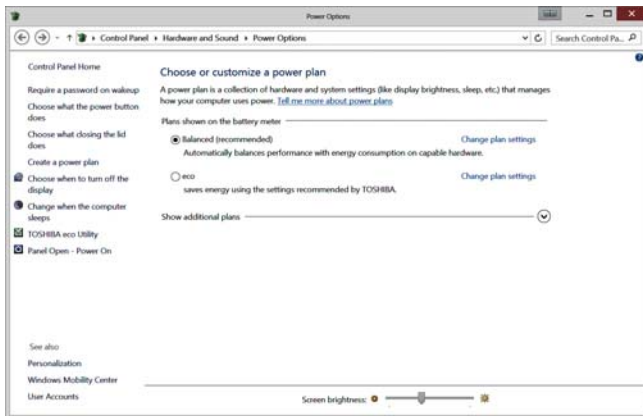

## Power Plans

You can choose a predefined Power Plan or select your own combination of power options.

To do this:

- 1 While on the desktop, click or touch the **Battery**  icon in the notification area.
- 2 Click or touch **More power options**.

The Windows® Power Options window appears.

(Sample Image) Windows® Power Options window

- 3 Select an appropriate plan for your work environment or create your own custom plan.
- 4 Click or touch **Create a power plan** in the left pane to set up a new plan.

**NOTE** To edit a plan or to edit advanced settings, continue to the following steps.

---

- 5 Click or touch **Change plan settings** to choose the plan you want to edit.

This screen allows you to change basic settings.

- 6 Click or touch **Change advanced power settings** to access settings for battery notification levels, internal storage drive power save time, etc.

You can click or touch the plus signs to expand each item and to see what settings are available for each item.

- 7 Click or touch **OK** to save the plan changes you have performed.

Depending on your model, the two power plans eco and Balanced are satisfactory for most people and do not need to be edited. The eco plan is the best used for maximum battery time. The Balanced plan is a compromise between battery time and performance.

## Using the eco power plan

This computer is equipped with the eco power plan. Operating the computer with this power plan enabled reduces electrical power consumption by slightly lowering system performance. For example, when this power plan is enabled, the brightness of the display is reduced and the interval before Sleep mode takes effect is shortened. To enable or disable the eco power plan, see [“Power Plans” on page 85](#).

The eco Utility<sup>®</sup> monitors your power savings from using the eco power plan by tracking real-time power consumption and accumulated savings over time. To learn how to access the utility, see [“eco Utility<sup>®</sup>” on page 103](#).

For more information on the eco power plan, see the Help file in the eco Utility<sup>®</sup> window.

---

## Changing the main battery

---

**NOTE** The computer's battery is not accessible by the user.

---

When your main battery has run out of power, plug in the AC adaptor.

If you find that a new battery is needed, contact the location you purchased the computer at for more information on replacing the battery. Toshiba will not be responsible for any product damage, data loss, service or part replacement made necessary by improper installation of a new battery.

---

**⚠ WARNING** If the computer is leaking or its case is cracked, put on protective gloves to handle it.

---

## Taking care of your battery

The following sections offer tips on how to take care of your battery and prolong its life.

### Safety precautions

---

**⚠ WARNING** Always immediately turn the power off and disconnect the power cable/cord plug from the plug socket and stop using the computer if you observe any of the following conditions:

- ❖ Offensive or unusual odor
- ❖ Excessive heat
- ❖ Discoloration
- ❖ Deformation, cracks, or leaks
- ❖ Smoke
- ❖ Other unusual events during use, such as abnormal sound

Do not expose the computer to fire. The battery could explode.

Do not turn on the computer's power again until an authorized Toshiba service provider has checked it for safety. Continued use could cause a fire or rupture possibly resulting in serious injury or computer failure including but not limited to the loss of data.

---

## Maintaining your battery

Fully discharging your battery pack will allow better accuracy of the battery meter.

To fully discharge your battery pack, periodically, disconnect the computer from a power source and operate it on battery power until the battery pack fully discharges.

## Disposing of your computer

---

### **⚠ WARNING**

Never attempt to dispose of a computer by burning or by throwing it into a fire, and never allow exposure to a heating apparatus (e.g., microwave oven). Heat can cause a computer to explode and/or release caustic liquid, both which may possibly cause serious injury.

---

Discard this computer in accordance with applicable laws and regulations.

Disposal of this product may be regulated due to environmental considerations. For disposal, reuse or recycling information, please contact your local government.

In addition, Toshiba's recycling initiatives include recycling programs, events and consumer promotions. For details, please visit [us.toshiba.com/green](http://us.toshiba.com/green).

Notice regarding CR coin cell batteries, applicable to California, U.S.A. only:

Perchlorate Material - special handling may apply.

See <http://www.dtsc.ca.gov/hazardouswaste/perchlorate/>

## Traveling tips

The environmental precautions listed in “[Selecting a place to work](#)” on page 30, also apply while traveling.

- ❖ Never leave your computer on a sunny ledge or in a place where it could get wet or covered in dust.
- ❖ Always travel with the computer in a carrying case. Toshiba offers a choice of carrying cases for the computer. They all provide plenty of extra space for manuals, power cords, and compact discs. Contact your authorized Toshiba representative for more information or visit Toshiba's Web site at [accessories.toshiba.com](http://accessories.toshiba.com).

TECHNICAL NOTE: When traveling by air, you may be required to pass your computer through airport security equipment. The X-ray equipment will not harm your computer.

---

---

**NOTE**

Before using your computer aboard an aircraft, make sure the Wireless antenna is OFF (Airplane mode is ON) if your computer has wireless LAN capability.

---

---

**NOTE**

To enable or disable wireless communication, use the Fn + F8 key. For more information see [“TOSHIBA Function Keys” on page 147](#).

## Exploring Your Computer's Features

---

In this chapter, you will explore some of the special features of your computer.

### Exploring the Start screen

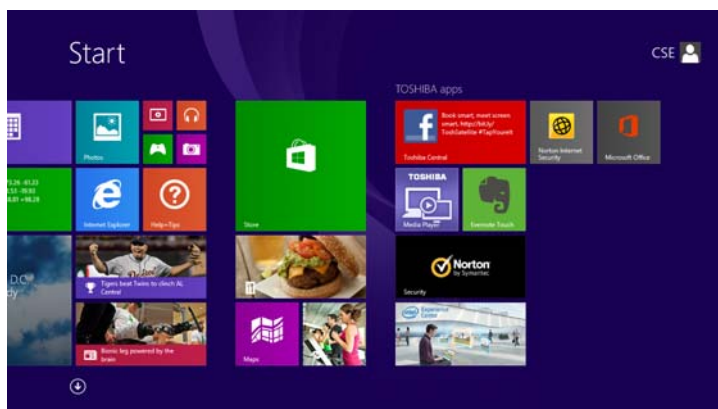

The Start screen is the launching pad for everything you can do in the Windows® operating system, providing new and easy ways to access everything from your favorite apps and Web sites to your contacts and other important information.

When you move your pointer to the upper-right corner of the screen or swipe in from the right edge, a list of Windows® charms will slide out from the right. These Windows® charms perform various commands, including basics tasks like turning off the power and advanced PC settings.

You can go to the Start screen by clicking or touching the **Start** charm, see [“Charms” on page 91](#). You can also use the Windows® key (⊞) on your keyboard or on the LCD screen to go to the Start screen. For detailed information, please refer to the Windows® Help and Support.

By clicking on or touching the **Desktop** tile from the Start screen, you will find the Windows® settings and features you are most familiar with.

For detailed information on the new functionality, refer to the Windows® Help and Support.

App tiles

*(Sample Image) Windows® Start screen*

## Charms

Use the Windows® charms to start apps, find documents, set up system components, and perform most other computing tasks.

By moving your pointer to the upper-right corner of the screen or swiping in from the right edge your screen, you will find a list of charms: **Search**, **Share**, **Start**, **Devices** and **Settings**.

**Search**—This charm allows you to search for most anything you need to locate on your computer. It can help you find apps, documents, photos, and your favorite music.

**Share**—This charm allows you to share music and photos with your favorite social Web sites.

**Start**—This charm allows you to view all of the available apps downloaded to your system.

**Devices**—This charm allows you to manage your hardware devices.

**Settings**—This charm allows you to manage your system settings.

## Tiles

Tiles can be accessed and launched from the Start screen.

Typical Start screen tiles are the Desktop tile and Mail tile, as well as tiles representing all other applications downloaded to your system.

## Exploring the desktop

You can use its features to start applications, find documents, set up system components, and perform most other computing tasks.

**HINT:** The illustrated examples in this guide may appear slightly different from the screens displayed by your system. The differences are not significant and do not indicate any change in the functionality of your system.

---

## Finding your way around the desktop

Your computer's desktop includes several standard features: icons, taskbar, notification area, notifications, and background pattern.

*(Sample Image) Windows® Desktop screen*

---

## Icons

An icon represents a folder, file, or program that can be quickly activated by double-clicking or touching the icon.

You can create a new desktop icon for any folder, file, or program by dragging the element's icon from its location in a window to the desktop area.

You may see various icons displayed on your system desktop, for example:

**Recycle Bin**—Holds files you have deleted. You may be able to retrieve these files until you empty the Recycle Bin.

- ❖ **TECHNICAL NOTE:** If you delete a large number of files or very large files from the internal storage drive, there may be insufficient space available in the Recycle Bin to hold these files. In this case, Windows® will prompt you to either permanently delete the file(s) or cancel the deletion.
- ❖ If you delete a file (of any size) from an external media or flash media, it does not go into the Recycle Bin. The file is permanently deleted.
- ❖ Permanently deleted files cannot be recovered from the Recycle Bin.  
For more information on the Recycle Bin, see Windows® online Help.

---

### NOTE

If you place the pointer over an icon, a popup description of the file contents appears.

---

Your desktop may contain other icons depending on your configuration. See Windows® online Help for more specific information on each icon and how to use it.

## Taskbar

Each time you open a program, a button associated with that program appears on the taskbar. With some programs, a button appears on the taskbar for each document or window you open. You can use these buttons to quickly switch between the programs or windows.

To make a program or window the currently active one, click or touch the associated taskbar button.

## Notification area

The notification area displays icons of tasks or programs that run continuously in the background and displays notifications. To learn more about each task, position the pointer over the icon for a few moments and a short description of the task appears.

Typical tasks in the notification area are Current time, Power usage mode, network connectivity status, and speaker volume.

To activate a specific task, click or touch the appropriate notification area icon.

## Notifications

There are many types of notifications you can employ to help you with the many tasks you perform every day.

User experience notifications can be set for toast, tile, badge, and raw notifications.

**Toast notifications**—Designed for time-sensitive delivery of personalized content, such as an instant message from a friend.

**Tile notifications**—Used by applications that are not currently running with an at-a-glance characteristic, giving you a quick preview of the subject line of your latest email or the current weather conditions.

**Badge notifications**—A specialized type of tile notification (shown on the Start screen tile) using glyphs to indicate the number of applications that have updates available or the status of a running application.

**Raw notifications**—These run a background task on behalf of an application while that application is not running in order to make available the latest content, such as an online newspaper.

## Windows® Store

Although many applications will be pre-installed or built-in to your computer, you will also have the ability to download many other applications with a touch or the click of your mouse.

In the Windows® Store you can search for and browse thousands of apps, all grouped into easy to find categories.

---

## Setting up for communications

To connect to the Internet or to communicate across telephone lines with another computer, you need:

- ❖ A browser or communications program
- ❖ An Internet Service Provider (ISP) or online service if you plan to use the Internet
- ❖ A way to connect to the ISP (for example Wi-Fi®/LAN/broadband connection, etc.)

### Connect to the Internet

---

**NOTE** Wireless connectivity and some features may require you to purchase additional software, external hardware or services. Availability of public wireless LAN access points may be limited.

---

Follow the steps below to set up your Wireless connection.

- 1 Move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear, click or touch the **Settings** (⚙️) charm.
- 2 Click or touch the **Wi-Fi** (📶) icon.  
The Networks screen appears.
- 3 Select your network.
- 4 Click or touch **Connect**.
- 5 Enter the network security key (if applicable).
- 6 Click or touch **Next**.

Your computer should then be connected.

---

**NOTE** To enable or disable wireless communication, use the Fn + F8 key. For more information see [“TOSHIBA Function Keys” on page 147](#).

---

---

**NOTE** When Airplane mode is OFF, the wireless indicator light (📶) will be lit.

---

For help with common Wi-Fi® networking problems, see [“Wireless networking problems” on page 137](#).

## Connecting your computer to a network

You can connect your computer to a network to increase its capabilities and functionality.

### Accessing a network

For specific information about connecting to the network, consult your network administrator. Many hotels, airports, and offices offer Wi-Fi® access.

## Exploring audio features

You can use your computer to record sounds using the computer's internal microphones (available on certain models) or an optional external microphone. You can listen to sound files or audio CDs using the built-in speakers, headphones, or external speakers.

### Recording sounds

You may record sounds using the computer's internal microphones (available on certain models) or by connecting an optional external microphone.

#### Using a microphone

- 1 If you want to use an external microphone, connect it to the computer.
- 2 From the Start screen begin typing **Sound Recorder** and click or touch your selection. If you are in the Desktop, move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear click or touch the **Search** (🔍) charm and, in the Search field, type **Sound Recorder**.

Start Recording/Stop Recording button

*(Sample Image) Sound Recorder screen*

- 3 Click or touch the **Start Recording** button.
- 4 Speak normally into the microphone.

- 5 When you have finished recording, click or touch the **Stop Recording** button.  
The **Save As** dialog box appears.
- 6 To save the file, type a file name, and then click or touch **Save**.

## Using external speakers or headphones

Your computer is equipped with a full stereo sound system with internal speakers. Instead of using the internal speakers, you can connect headphones or a pair of external stereo speakers.

### CAUTION

Before putting on headphones to listen, turn the volume down. Do not set the volume too high when using headphones. Continuous exposure to loud sound can harm your hearing.

**TECHNICAL NOTE:** When using amplified speakers, use speakers that require an external power source. Other types of speakers will be inadequate to produce sound from the computer.

To play back sound files through external speakers or headphones:

- 1 Locate the headphone jack on the computer.
- 2 Using any necessary adapters, plug the cable from the headphones or external speakers into the headphone jack.

The headphone jack requires a 16-ohm stereo mini connector.

To adjust the volume:

- ❖ For external speakers, use the volume controls on each speaker.
- ❖ For headphones, use the computer's volume control.

## Using the Web Camera

Your computer may come with a built-in Web Camera. With this Web Camera you can do the following:

- ❖ Take pictures and record videos with your computer
- ❖ Chat with others and have them see you while using instant messaging (IM) programs
- ❖ Have video conference calls

---

### NOTE

To email, instant message or video conference, you must be connected to the Internet.

---

Depending on your computer model, the process of sending email, taking pictures or recording video messages may vary.

To access the Web Camera, on the Start screen click or touch the **Camera** tile. The Web Camera indicator light glows when the Web Camera is active.

---

### NOTE

When the Web camera is not active the indicator light is off.

---

## Using the Smart Card Reader

(Available on certain models.)

---

### NOTE

To locate your Smart Card slot please refer to your Quick Start document.

---

Your computer may include a Smart Card Reader. This allows you to use a Smart Card for added security purposes. There are several different Smart Cards available for purchase as well as the software application needed. Visit your local electronics store or check the Web for other sources.

\*Available on certain models

*(Sample Illustration) Smart Card Reader on side of computer*

## Using the Memory card reader

The Memory card reader supports the use of Secure Digital™ (SD™, SDHC™, SDXC™), microSD™, miniSD™, MultiMediaCard® (MMC®), and may support other media. These media can be used with a variety of digital products: digital music players, cellular phones, PDAs, digital cameras, digital video camcorders, etc.

---

**CAUTION** To use a microSD™ Card or miniSD™ Card, an SD™ adapter is required.

---

The Memory card reader may also support other types of media.

---

**NOTE** Do not use the Copy Disk function for this type of media. To copy data from one media to another, use the drag-and-drop feature of the Windows® operating system.

---

## Inserting memory media

---

**NOTE** To locate your Memory card reader, please refer to your Quick Start document.

---

The following instructions apply to all types of supported media devices.

- 1 Turn the media so that the contacts (metal areas) are face down.
- 2 Push the media into the adapter until it stops.

*(Sample Illustration) Inserting memory media*

**CAUTION**

When inserting memory media, do not touch the metal contacts. You could expose the storage area to static electricity, which can destroy data.

**NOTE**

Always remove memory media when not in use.

## Removing memory media

- 1 If you are not currently on the Desktop, choose the Desktop tile on the Start screen, otherwise skip to step 2.
- 2 Prepare the card for removal by clicking on or touching the **Show hidden icons** button (▲), if necessary, in the notification area and then selecting the **Safely Remove Hardware and Eject Media** icon.

- 3 Highlight, and then click or touch the item you would like to eject.

If the system is unable to prepare the media for safe removal, a message will tell you to try again later. If the media can be removed now, the system displays **Safe to Remove Hardware**.

If the computer has a spring-loaded adapter slot, see step 4; otherwise, skip to step 5.

- 4 Gently press the card inward to release it.  
The card pops out slightly.
- 5 Grasp the card and pull it straight out.

*(Sample Illustration) Removing memory media*

**CAUTION**

Do not remove memory media while data is being written or read. Even when the Windows® message “copying...” disappears, writing to the media might still be in progress and your data could be destroyed. Wait for the indicator light to go out.

## Using the expansion port

(Available on certain models.)

\*Available on certain models

*(Sample Illustration) Expansion port on underside of computer*

**NOTE**

To locate your expansion port please refer to your Quick Start document.

The expansion port, located on the bottom of your computer, is used to attach expansion devices such as a Port Replicator (not shipped with your system). A Port Replicator is an excellent investment if you are using your computer both in and out of the office. While you are using your computer away from your desk, you can leave network cables and external devices (such as printers, a mouse, speakers, and USB devices) connected to a Port Replicator on your desk. When you return to your desk, you can then quickly connect your computer to the Port Replicator and have immediate access to all of your network resources and external devices. This eliminates the time-consuming process of connecting each external device individually, and saves wear and tear on the ports and cables.

To achieve a proper connection between your computer and the Port Replicator, your computer must be properly aligned with the Port Replicator. For more information, consult the user's manual that came with your Port Replicator, or visit [support.toshiba.com](http://support.toshiba.com).

On some computer models, you can attach an extended life battery to the expansion port. To find expansion devices compatible with your computer model, please visit [accessories.toshiba.com](http://accessories.toshiba.com).

## Password Utility

Setting a password lets you walk away from your computer while providing additional protection for your files. When you set a password, you must enter the password before you can work on your computer again.

TOSHIBA supports different types of passwords on your computer:

- ❖ A supervisor password—Prohibits unauthorized users from accessing certain functions such as System Settings. This is useful if more than one person uses the computer.
- ❖ A user password—Prevents unauthorized users from starting the computer.

When setting up passwords, keep the following in mind:

- ❖ The supervisor password must be set before the user password, or the user password must be deleted and then re-entered after the supervisor password is set.
- ❖ The user password can be set up under the supervisor password.

## Using a supervisor password

A supervisor password prevents other users from changing hardware configuration options.

## Setting a supervisor password

- 4 Click or touch **Delete**.  
An authority verification pop-up screen appears.
- 5 Click or touch **Delete**.
- 6 Enter the password, and then click or touch **Verify**.
- 7 Click or touch **OK** to exit.

## Sleep Utilities

This utility displays whether the “USB Sleep and Charge function” is enabled or disabled and shows the position of the USB port that supports the “USB Sleep and Charge function.”

- 1 To access Sleep Utilities from the Start screen begin typing **System Settings**.
- 2 Click or touch **System Settings**.
- 3 Click or touch **Sleep Utilities**.

## USB Sleep and Charge

Your computer can supply USB bus power (DC 5V) to the USB port even when the computer is in Sleep mode, Hibernation mode or shutdown state (powered off).

This function can only be used for the port that supports the USB Sleep and Charge function (hereinafter called “compatible port”).

Compatible ports are USB ports that have the (⚡) symbol icon.

You can use the “USB Sleep and Charge function” to charge certain USB compatible external devices such as mobile phones or portable digital music players. However, the “USB Sleep and Charge function” may not work with certain external devices even if they are compliant with the USB specification. In those cases, power on the computer to charge the device.

**NOTE**

- ❖ When “USB Sleep and Charge function” is set to Enabled, USB bus power (DC 5V) will be supplied to the compatible port even when the power of the computer is turned OFF. USB bus power (DC 5V) is similarly supplied to the external devices which are connected to the compatible ports. However, some external devices cannot be charged solely by supplying USB bus power (DC 5V). As for the specifications of the external devices, please contact the device manufacturer or check the specifications of the external devices thoroughly before use.
- ❖ If USB Sleep and Charge is enabled, the computer's battery will discharge during standby and hibernation or when the computer is turned off. It is recommended that you connect the AC adaptor to the computer when enabling the USB Sleep and Charge function.
- ❖ Using the “USB Sleep and Charge function” to charge external devices will take longer than charging the devices with their own chargers.
- ❖ If an external device is connected to the compatible port when the AC adaptor is not connected to the computer, the battery of the computer will be depleted even when the power of the computer is turned OFF. As such, we recommend that you connect the AC adaptor to the computer when using the “USB Sleep and Charge function.”
- ❖ External devices connected to the USB bus power (DC 5V) function that interfaces with the power ON/OFF of the computer may always be in an operational state.
- ❖ When there is a current overflow of the external device connected to the compatible port, USB bus power (DC 5V) supply may be stopped for safety reasons.
- ❖ When “USB Sleep and Charge function” is set to Enabled, the “USB Wakeup function” does not work for compatible port. In that case, if there is a USB port that does not have the USB Sleep and Charge function-compatible icon (⚡), attach the mouse or keyboard to it. The “USB Wakeup function” will now work, but the “USB Sleep and Charge function” will be disabled.

**⚠ WARNING**

Metal paper clips or hair pins/clips will generate heat if they come into contact with USB ports. Do not allow USB ports to come into contact with metal products, for example when carrying the computer in your bag.

## Enabling/Disabling USB Sleep and Charge

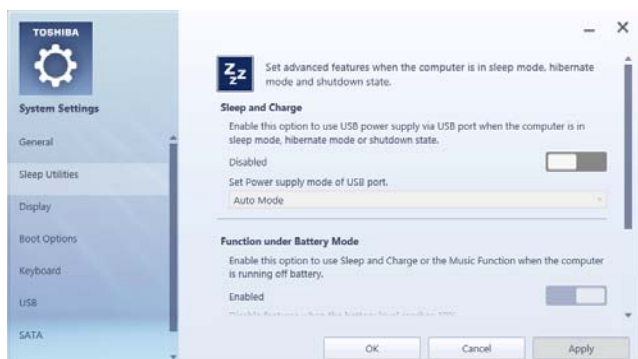

This utility can be used to enable or disable the USB Sleep and Charge function. To enable this function, select **Enable**. To disable this function, toggle the Enable button to the **Disabled** position.

You can also control whether charging takes place when the computer is running on battery power. To do so, select or de-select the **Enable under Battery Mode** check box in the utility.

If you enable charging when the computer is running on battery power, you can specify that charging stops when battery power drops below a certain level. Use the slider at the bottom of the utility window (beneath the “Disable features when the battery level reaches 10%” heading) to specify when charging should stop. For example, if you set the slider to 10%, charging will stop when 10% or less of the battery power remains.

## Power supply mode settings

Your computer may provide two different charging modes, to support various types of USB devices. If your computer provides more than one charging mode, the charging mode you should select depends on the USB device you want to charge. For example, **Auto Mode**, which is the default mode, will charge a wide variety of digital audio players. If your device does not charge in Auto Mode, try using **Alternate Mode**. To select a different charging mode, use the **Power supply mode** drop-down list in the utility.

*(Sample Image) Sleep and Charge screen*

**NOTE**

With certain external devices, the USB Sleep and Charge function may not work no matter which charging mode you select. In those cases, disable USB Sleep and Charge in the utility and turn the computer on to charge the device, or use a different charging device.

## Function Key

**NOTE** The Function option is disabled by default.

TOSHIBA Function Key enables you to activate functions by pressing specific keys either singly or in combination with Fn. Some functions show the toast notification at the edge of the screen. These settings turn notifications ON/OFF.

- 1 To access Function Key from the Start screen begin typing **Function Key**.
- 2 Click or touch **Function Key**.  
The Function Key screen appears.

*(Sample Image) Function Key*

- 3 Slide the ON/OFF switch to enable/disable the each notification.
- 4 Click or touch **Close**.

## Recovery Media Creator

The Recovery Media Creator utility enables you to create recovery media that can be used to return your system to its out-of-box state, if necessary. For detailed information on using the utility to create recovery media, see [“Creating recovery media” on page 48](#).

## Service Station

The Service Station helps you keep your new computer running at its best by notifying you when updated software, firmware, documentation or other information is available for your computer. The Service Station will alert you when updates are available, and you can then choose to install the updates if you wish.

## TOSHIBA Application Installer

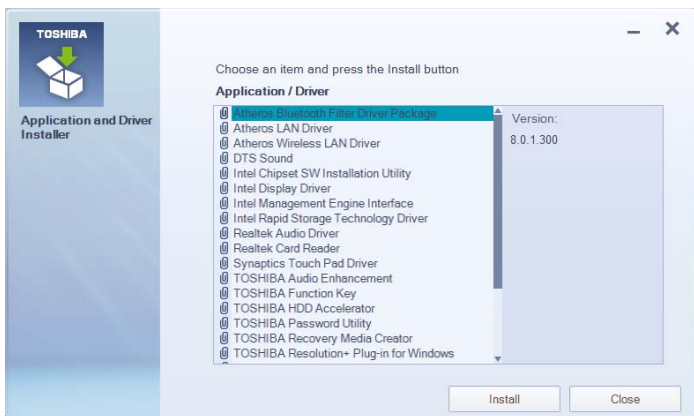

**NOTE** You must have an Internet connection to reinstall applications.

The TOSHIBA Application Installer allows you to reinstall the drivers and applications that were originally bundled with your computer.

To reinstall drivers and applications:

- 1 To access TOSHIBA Application Installer from the Start screen begin typing **Application Installer**.
- 2 Click or touch **TOSHIBA Application Installer**.

The TOSHIBA Application Installer window appears.

*(Sample Image) TOSHIBA Application Installer selection screen*

- 3 Click or touch the item you want to install.
- 4 Click or touch **Install**, then follow the on-screen prompts to complete the installation process.

## Fingerprint Authentication Utility

(Available on certain models.)

The fingerprint authentication utility can be used to replace the keyboard-based user password authentication system when booting up.

The fingerprint authentication utility can also be used for user logon. The user's fingerprint is read; if the system recognizes the fingerprint, the user is automatically logged on.

### Fingerprint utility limitations

TOSHIBA does not guarantee that the fingerprint utility technology will be completely secure or error-free. TOSHIBA does not guarantee that the fingerprint utility will accurately screen out unauthorized users at all times. TOSHIBA is not liable for any failure or damage that might arise out of the use of the fingerprint software or utility.

### Using the Fingerprint Authentication Utility

To access the Fingerprint Authentication Utility from the Start screen begin typing **Fingerprint Utility**, then click or touch the **Fingerprint Utility**. For information on enrolling fingerprints and using the utility please refer to your online Help file.

---

#### NOTE

It is recommended that you complete the Fingerprint practice tutorial before starting fingerprint enrollment. The Fingerprint practice tutorial shows how to achieve the highest quality fingerprint samples.

If you choose to use this utility it is strongly recommended that you delete your fingerprint template data before transferring ownership or disposing of your computer. Otherwise, personal information and/or proprietary information on the internal storage drive may be viewed by a third party. For details on how to delete the fingerprint data, see your online Help file.

---

## Fingerprint Logon

The fingerprint utility enables logon to your computer using fingerprints. During user enrollment, fingerprint samples are saved and associated with the user's Windows® user account. When the user attempts to log on again, the user's fingerprint is read and compared with the user's enrolled fingerprints; if the fingerprint is recognized, user logon is completed.

The Fast User Switching feature of the Windows® operating system is also supported. If user A is logged on and the fingerprint utility verifies the fingerprint of user B (who is already enrolled), the utility recognizes the fingerprint and switches the users.

If your system supports power-on security, existing fingerprint samples can be used also for power-on authentication.

## Care and maintenance of your fingerprint reader

Failure to follow these guidelines and/or procedures might result in damage to the reader or cause reader failure, finger recognition problems, or lower finger recognition success rate.

- ❖ Do not scratch or poke the reader with your nails or any hard or sharp objects.
- ❖ Do not press the reader with too much pressure.
- ❖ Do not touch the reader with a wet finger or any wet objects. Keep reader surface dry and free of water vapor.
- ❖ Do not touch the reader with a soiled finger. Minute foreign particles on a soiled or dirty finger may scratch the reader.
- ❖ Do not paste stickers or write on the reader.
- ❖ Do not touch the reader with a finger or any object with built-up static electricity.

Observe the following before you swipe your finger on the reader, whether for fingerprint enrollment/registration or recognition.

- ❖ Wash and dry your hands thoroughly.
- ❖ Remove static electricity from your fingers by touching any metal surface. Static electricity is a common cause of reader failures, especially during dry seasons such as winter.

- ❖ Clean the reader with a lint-free cloth. Do not use detergent to clean the reader.
- ❖ Avoid the following finger conditions for enrollment or recognition as they may result in fingerprint enrollment errors or a drop in the fingerprint recognition success rate.
  - ❖ Soaked or swollen finger (e.g., after taking bath)
  - ❖ Injured finger
  - ❖ Wet finger
  - ❖ Soiled or oily finger
  - ❖ Extremely dry skin condition on finger

Observe the following to improve the fingerprint recognition success rate.

- ❖ Enroll two or more fingers.
- ❖ Enroll additional fingers if recognition failure occurs often using enrolled fingers.
- ❖ Check your finger condition. Changed conditions, such as injured, rough, extremely dry, wet, soiled, dirty, oily, soaked or swollen fingers, may lower the recognition success rate. Also if the fingerprint is worn down or the finger becomes thinner or fatter, the recognition success rate may be lowered.
- ❖ The fingerprint for each finger is different and unique. Please ensure that only the registered or enrolled fingerprint or fingerprints are used for identification.
- ❖ Check sliding position (see illustration below).

*(Sample Illustration) Aligning the finger on the reader*

---

## Fingerprint reader limitations

- ❖ The fingerprint reader compares and analyzes the unique characteristics in a fingerprint. However, there may be instances where certain users are unable to register their fingerprints due to insufficient unique characteristics in their fingerprints.
- ❖ A warning message will be displayed when recognition is abnormal or recognition is not successful within a fixed duration.
- ❖ The recognition success rate may differ from user to user.
- ❖ TOSHIBA does not guarantee that this fingerprint recognition technology will be error-free.

TOSHIBA does not guarantee that the fingerprint reader will recognize the enrolled user or accurately screen out unauthorized users at all times. TOSHIBA is not liable for any failure or damage that might arise out of the use of this fingerprint recognition software or utility.

# Chapter 6

## If Something Goes Wrong

---

Some problems you may encounter when using your computer are relatively easy to identify and solve. Others may require help from your network administrator or the manufacturer of the software program.

This chapter aims to help you solve many problems by yourself. It covers the problems you are most likely to encounter.

If all else fails, contact Toshiba. You will find information on Toshiba's support services at the end of this chapter.

### Problems that are easy to fix

#### Your program or application stops responding.

---

**NOTE**

The operating system allows for the use of both applications ("Apps" used with the Windows® "Modern UI") and programs (used in the traditional Windows® desktop environment). For the purpose of simplifying the information we will use the terms interchangeably in this chapter.

---

If you are working in a program that suddenly freezes, chances are the program has stopped responding. You can exit the program without shutting down the operating system or closing other programs.

To close a program that has stopped responding:

- 1 Press Ctrl, Alt, and Del simultaneously (once), and then click or touch **Task Manager**.

The Task Manager window appears.

- 2 Select the program or application you want to close, and then click or touch **End Task** in the lower right corner.

Closing the failed program should allow you to continue working. If it does not, continue with the next step.

- 3 Close the remaining programs one by one by selecting the program name, then select **End Task**.

Closing all programs should allow you to continue working. If it does not, power off your computer, and then restart it.

## **Problems when you turn on the computer**

These problems may occur when you turn on the power.

### **The computer will not start.**

Make sure you attached the AC adaptor and power cord/cable properly.

Press and hold the power button for at least 10 seconds.

If you are using the AC adaptor, check that the wall outlet is working by plugging in another device, such as a lamp.

Verify that the computer is on by looking at the Power button. If the button is glowing, the computer is on. If the button is not lit, try turning the computer off and then on again.

If you are using an AC adaptor, verify that the computer is receiving power from the external power source by checking the AC power light located on the left side of the computer. If the indicator is glowing, the computer is connected to a live external power source.

**The computer displays the** WARNING RESUME FAILURE/Windows Error Recovery – Windows did not shut down successfully **message.**

To continue, select **Start Windows normally**. This can happen if the computer was put into Sleep mode and the battery has discharged. If you performed a shutdown before this message was displayed, a program or driver may have prevented Windows® from shutting down.

Data stored in the computer's memory has been lost. Data stored in the computer's internal storage drive may not be affected.

Always save your data even when you are using Sleep mode. If your battery fully discharges, information that has not been saved will be lost. Your computer can be configured to warn you when the battery is running low see [“What to do when the main battery runs low” on page 83](#).

If you are running on battery power, it is recommended that you do not leave the computer in Sleep mode for long periods of time.

To charge the battery, leave the computer plugged into a live wall outlet for several hours. For more information see [“Charging the main battery” on page 79](#).

### **The AC power light is blinking.**

If the AC power light is blinking, try the following steps:

- 1 Connect the AC adaptor to a different power outlet, preferably in a different room. If the computer starts normally, there may be a problem with the AC outlet itself, or the voltage level available from it.
- 2 Verify that the AC adaptor is the correct unit for your computer model. The computer may not be able to start from an AC adaptor that is rated for less current (amperage) than the computer requires, even if the rated voltage is correct, and the plug fits correctly in the DC-IN socket. The labels on the bottom of the computer and the AC adaptor show the specifications for voltage (“V”) and current (“A”) for each device. The voltage level must match exactly. The amperage rating of the AC adaptor must be equal to or greater than that required by the computer.

## **The battery light is blinking when the computer is on.**

If the battery light is blinking when the computer is on, this indicates a power mismatch. Do the following:

- 1** Check the OUTPUT specifications on the AC adaptor (for example, DC 19V – 3.95A)
- 2** Check the INPUT specifications on the bottom of the computer.  
  
The output specifications of the AC adaptor must match the input specifications of the computer.
- 3** If the specifications do not match, locate and use the AC adaptor that shipped with your computer. If the specifications do match, contact Toshiba. See [“Contacting Toshiba” on page 145.](#)

## **The Windows® operating system is not working**

Once you are familiar with your computer and used to the way the operating system responds to your work routine, you can easily detect if the operating system is not working correctly. For example:

- ❖ The operating system fails to start after the initial startup appears.
- ❖ The operating system takes a long time to start.
- ❖ The operating system responds differently from the normal routine.
- ❖ The screen does not look right.

Unless a hardware device has failed, problems usually occur when you change the system in some way such as installing a new program or adding a device.

If you experience any of these problems, use the options in the Startup menu to fix the problem.

## **Using Startup options to fix problems**

If the operating system fails to start properly, you may need to troubleshoot the Operating System and/or its settings. There are several options to choose from depending on the severity of the problem and your level of expertise with computers.

If Windows® fails to start properly twice, the Windows® Boot menu will launch. To enter the Advanced Startup options manually:

- 1 From the Start or Desktop screen, move your pointer to the upper-right corner of the screen or swipe in from the right edge.
- 2 When the Windows® charms appear, click or touch the **Settings** (⚙️) charm.
- 3 Click or touch **Change PC Settings**.
- 4 Click or touch **Update and recovery**.
- 5 Click or touch the **Recovery**.
- 6 Click or touch **Restart Now** under **Advanced Startup**.

The computer restarts.

- 7 Click or touch **Troubleshoot** from the menu.

You now have several options:

### Refresh your computer

- ❖ Your files and personalization settings will not change
- ❖ Your computer settings will be changed back to their defaults
- ❖ Your Apps from the Windows® Store are retained
- ❖ Apps you installed from discs or Web sites are removed
- ❖ A list of removed apps is saved to your desktop

For more information, see [“Refresh your PC \(with user’s data\)” on page 52](#).

### Reset your computer

- ❖ All of your personal files and apps are removed
- ❖ Your computer settings are changed back to their defaults

For more information, see [“Reset your PC” on page 54](#).

---

## **Advanced options**

Choosing this option presents you with another set of options:

### **System Restore**

- ❖ System Restore allows you to use a Restore point to return the computer to a state at which it was performing properly.

Restore points may be created:

- ❖ When new hardware or software is installed
- ❖ Manually by the user

### **System Image Recovery**

Windows® will “Recover” the Operating system using a specific image provided by the user.

### **Startup Repair**

This feature automates the repair process. The Operating System will automatically look for problems and repair them if possible.

### **Command Prompt**

The command prompt is a very powerful tool for advanced users.

### **Startup Settings**

In previous Operating Systems the majority of the options found on this menu were available by pressing the F8 key during the Windows® boot process:

- ❖ Enable low resolution video mode  
Restarts Windows® using your current video driver at low resolution. This allows you to reset your display settings in the event they have been improperly set.
- ❖ Enable debugging mode  
Starts Windows® in an advanced troubleshooting mode
- ❖ Enable boot logging  
Creates a file that lists all the drivers that are installed during startup

❖ **Enable Safe Mode**

Starts Windows® with a minimal set of drivers and services. If the computer starts and runs in Safe Mode, you will know the Operating System is most likely working properly and that you should look to third-party applications or drivers for the source of your problem.

❖ **Disable driver signature enforcement**

Allows drivers containing improper signatures to be installed

❖ **Disable early-launch anti-malware protection**

Allows drivers to initialize without being measured by the Anti-malware driver

❖ **Disable automatic restart on system failure**

Prevents Windows® from automatically restarting if an error causes it to fail. Choose this option only if Windows® is stuck in a loop where it fails, attempts to restart, and fails again repeatedly.

## **Internet problems**

### **My Internet connection is very slow.**

Many factors contribute to the speed with which you can surf the Internet. They include: network speed, network conditions, time of day (when everyone else is surfing, your access can be slow) and popularity of the sites you are trying to access. If accessing a particular site is very slow, try later.

### **My browser cannot find the URL address I typed in.**

Make sure you separated the domain names of the address with the forward slash (/). Check the spelling of each name and the syntax of the address carefully. A single incorrect letter or missed character will make it impossible for your browser to locate the site.

### **My browser cannot find a site I bookmarked.**

The World Wide Web is constantly changing. A site you bookmarked yesterday may not be available today or its server may be down for temporary repair. Try again later.

---

## The Windows® operating system can help you

If the operating system has started properly but you still have a problem using your computer, the online Help can assist you in troubleshooting the problem. Getting to the online Help will differ depending on which interface you are in:

❖ **Start screen—Type Help and Support**

---

**NOTE** As soon as you begin typing, the search feature automatically begins.

---

❖ **Desktop—Press the F1 key**

When the “Windows Help and Support” screen appears, do one or both of the following:

- ❖ In the open search field type the topic you need help with and follow the on-screen instructions
- ❖ Click or touch one of the options listed in the window and follow the instructions

You can connect to Support Online by going to Toshiba support at [support.toshiba.com](http://support.toshiba.com).

## Fixing a problem with Device Manager

Device Manager provides a way to check and change the configuration of a device.

---

**CAUTION** Changing the default settings using Device Manager can cause other conflicts that make one or more devices unusable. Device Manager is a configuration tool for advanced users who understand configuration parameters and the ramifications of changing them.

---

## Checking device properties

Device Manager provides a way to view the properties of a device. Properties include the name of the manufacturer, the type of device, the drivers installed, and the system resources assigned to the device.

To check a device's properties:

- 1 From the Start screen, type **Device Manager**.

- 2 Click or touch **Device Manager**.

The Device Manager screen appears.

- 3 From the list of device(s), double-click or touch the device type.

- 4 To view the device(s) installed, double-click or touch the device.

The operating system displays the device Properties dialog box, which provides an array of tabs. They may include:

- ❖ The **General** tab, which provides basic information about the device.
- ❖ The **Resources** tab, which lists resources assigned to the device. This tab does not appear if the device is not using resources.
- ❖ The **Driver** tab, which displays the drivers being used by the device. This tab also provides options for updating the driver or rolling back the driver in case the new version is causing a problem.

The tabs that appear in the dialog box vary from one device to another.

For more information about Device Manager, refer to Windows® online Help.

## Power and the batteries

Your computer receives its power through the AC adaptor and power cord/cable or from the system batteries (battery and real-time clock (RTC) battery). Power problems are interrelated. For example, a faulty AC adaptor or power cord/cable will neither power the computer nor recharge the batteries.

Here are some typical problems and how to solve them:

### **The AC power light does not come on when you plug in the AC adaptor and power cord/cable.**

Make sure the AC adaptor and power cord/cable are firmly plugged into both the wall outlet and the computer.

If the AC power light still does not come on, check that the wall outlet is working properly by plugging in a lamp or other appliance.

---

**The AC adaptor and power cord/cable work correctly, but the battery will not charge.**

The battery does not charge while the computer is consuming full power. Try turning off the computer.

The battery may be too hot or too cold to charge properly. If you think this is the probable cause, let the battery reach room temperature and try again.

If the battery has completely discharged, it will not begin charging immediately. Leave the AC adaptor and power cord/cable connected, wait 20 minutes and see if the battery is charging.

If the battery light is glowing after 20 minutes, let the computer continue charging the battery for at least another 20 minutes before you turn on the computer.

If the battery light does not glow after 20 minutes, the battery may have reached the end of its useful life.

**The battery appears not to power the computer for as long as it usually does.**

If you frequently repeat shallow charge and discharge, the battery meter may become inaccurate. Let the battery discharge completely, then try charging it again.

Check the power options via your Power Plans (see [“Power Plans” on page 85](#)). Have you added a device that takes its power from the battery? Is your software using the internal storage drive more? Is the display power set to turn off automatically? Was the battery fully charged to begin with? All these conditions affect how long the charge lasts.

After a period of time, the battery will lose its ability to perform at maximum capacity and will need to be replaced. This is normal for all batteries.

For more information on maintaining battery power, see [“Changing the main battery” on page 87](#).

---

## Keyboard problems

**NOTE**

To capture a print screen of the entire screen, press the Fn + PRTSC key. (This only applies to models with a 10-key keypad.)

To capture only the active window displayed, press Fn + ALT while simultaneously pressing the PRTSC key.

---

**You have connected an external keyboard and the operating system displays one or more keyboard error messages.**

You may need to update your keyboard driver. Refer to the documentation that came with the keyboard or to the keyboard manufacturer's Web site.

The keyboard you connected may be defective or incompatible with the computer. Try using a different make of keyboard.

## Display problems

Here are some typical display problems and their solutions:

**The screen is blank.**

Display Auto Off may have gone into effect. Press any key to activate the screen.

If you are using the built-in screen, make sure the display priority is not set for an external monitor. To do this, press Fn + F5. If this does not correct the problem, press Fn + F5 again to return the display priority to its previous setting.

---

**HINT:** Pressing the Fn + F5 key several times will advance you through the display options.

---

If you are using an external monitor:

- ❖ Check that the monitor is turned on.
- ❖ Check that the monitor's power cord/cable is firmly plugged into a working power outlet.
- ❖ Check that the cable connecting the external monitor to the computer is firmly attached.
- ❖ Try adjusting the contrast and brightness controls on the external monitor.
- ❖ Press Fn + F5 to make sure the display priority is not set for the built-in screen.

**The screen does not look correct.**

Choose a theme for your desktop background, under **Change the visuals and sounds on your computer**, in the **Themes** panel. You can also change the setting for individual components separately by selecting an item from just below the **Themes** panel (**Desktop Background**, **Color**, **Sounds**, and **Screen Saver**).

For more information, see the Windows® online Help.

**A message displays saying that there is a problem with your display settings and that the adapter type is incorrect or the current settings do not work with your hardware.**

Reduce the size of the color palette to one that is supported by the computer's internal display.

To change the display properties:

- 1 Right-click or touch & hold in a blank area of the Windows® desktop.
- 2 Click or touch **Personalize**, and then **Display**.
- 3 Use the menu on the right hand side of the page to:
  - ❖ Adjust resolution
  - ❖ Adjust brightness
  - ❖ Calibrate color
  - ❖ Change display settings
  - ❖ Project to a second screen
  - ❖ Adjust ClearType text
- 4 Click or touch **OK**.

**The display mode is set to Simultaneous and the external display device does not work.**

Make sure the external monitor is capable of displaying at resolutions of 1280 x 800 or higher. Devices that do not support this resolution will only work in Internal/External mode, and not simultaneous mode.

**Small bright dots appear on your TFT display when you turn on your computer.**

Small bright dots may appear on your screen display when you turn on your computer. Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. Any small bright dots that may appear on your display are an intrinsic characteristic of the TFT manufacturing technology. Over a period of time, and depending on the usage of the computer, the brightness of the screen will deteriorate. This is also an intrinsic characteristic of the screen technology. When the computer is operated on battery power, the screen will dim and you may not be able to increase the brightness of the screen while on battery power.

## Disk or storage drive problems

Problems with the storage drive or with external media usually show up as an inability to access the drive or as sector errors. Sometimes a drive problem may cause one or more files to appear to have garbage in them.

### Error-checking

**NOTE** This feature is not available for optical disc drives.

Run Error-checking, which analyzes the directories and files on the storage drive and repairs any damage it finds.

To run Error-checking:

- 1 From the Start screen, type **computer**.
- 2 Click or touch **This PC** from the list that appears.
- 3 Right-click or touch the drive you wish to check.

*(Sample Image) Clicking on or touching the drive*

- 4 In the pop-up menu, click or touch **Properties**.  
The drive's Properties box appears.
- 5 Click or touch the **Tools** tab.
- 6 Click or touch the **Check** button.  
The Error Checking box appears.  
The system will alert you if you need to scan the drive.

- 7 Even if you do not need to scan the drive for errors you can scan by clicking or touching **Scan drive**.

Error-checking tests and repairs the storage drive.

### **Your hard disk seems very slow.**

If you have been using your computer for a long time, your files may have become fragmented. Run Disk Defragmenter.

To do this:

- 1 Move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear click or touch the **Search** (🔍) charm, then type **Defragment** in the Search field.
- 2 Click or touch **Defragment and Optimize Drives**.
- 3 From the Optimize Drives menu click or touch the drive you wish to defragment.
- 4 Click or touch the **Optimize** button.

The system will display the status as it optimizes and defragments the drive.

### **Your data files are damaged or corrupted.**

Refer to your software documentation for file recovery procedures. Many software packages automatically create backup files.

You may also be able to recover lost data using utility software. Consult your network administrator.

### **Some programs run correctly but others do not.**

This is probably a configuration problem. If a program does not run properly, refer to its documentation and check that the hardware configuration meets its needs.

## **Sound system problems**

### **No sound is coming from the computer's speakers.**

Adjust the volume control.

Try pressing the Fn + ESC key to see if volume mute is disabled.

Check that the volume control on the computer is turned up.

If you are using external headphones or speakers, check that they are securely connected to your computer.

**The computer emits a loud, high-pitched noise.**

This is feedback between the microphone and the speakers. It occurs in any sound system when input from a microphone is fed to the speakers and the speaker volume is too loud. Adjust the volume control.

## Printer problems

This section lists some of the most common printer problems.

**The printer will not print.**

Check that the printer is connected to a working power outlet, turned on and ready (on line).

Check that the printer has plenty of paper. Some printers will not start printing when there are just two or three sheets of paper left in the tray.

Make sure the printer cable is firmly attached to the computer and the printer.

Run the printer's self-test to check for any problem with the printer itself.

Make sure you installed the proper printer drivers as shown in the instructions that came with the printer.

You may have connected the printer while the computer is on. Disable Sleep mode, turn off the computer, and turn off the printer. Turn the printer back on, make sure it is online, and then turn the computer back on.

Try printing another file. For example, you could create and attempt to print a short test file using Notepad. If a Notepad file prints correctly, the problem may be in your original file.

If you cannot resolve the problem, contact the printer's manufacturer.

**The printer will not print what you see on the screen.**

Many programs display information on the screen differently from the way they print it. See if your program has a print preview mode. This mode lets you see your work exactly as it will print. Contact the software manufacturer for more information.

## Wireless networking problems

---

### NOTE

This section provides general troubleshooting tips for networking problems, specifically wireless (Wi-Fi®) networking.

The terms and concepts used assume a basic understanding of networks, and may be for more advanced users. If you need assistance or if you are not familiar with the terminology, please see Windows® Help and Support or contact your computer technician.

---

- ❖ If your computer is equipped with an internal Wi-Fi® adapter, verify that Airplane mode is OFF (the wireless indicator light  will be lit).
- ❖ Verify that your computer can detect access points or routers. If it can detect a Wi-Fi® access point or router then it may be a configuration issue.
- ❖ Verify that signal strength is good using the utility provided with the Wi-Fi® adapter.
- ❖ If another computer is on the same network, verify that it has network access, and can connect to the Internet. If, for example, the other computer cannot browse to a public Web site, the ISP's (Internet Service Provider) service may be disrupted.
- ❖ Verify that the Service Set Identifier (SSID), or network name, is correct - i.e., that it matches the SSID assigned to the access point you are attempting to connect through. SSIDs are case-sensitive.
- ❖ Check the Windows® Control Panel's Device Manager to verify that the Wi-Fi® adapter is recognized by the Windows® operating system, and that the driver is loaded. To access the Device Manager, from the Start screen begin typing **Control Panel**. If you are in the Desktop screen, move your pointer to the upper-right corner of the screen or swipe in from the right edge. When the Windows® charms appear click or touch the **Search**  charm, and then type **Control Panel**. Click or touch **Control Panel**, and then select **System and Security**, and then **System**. Launch the Device Manager and carefully note any error messages - these will be very helpful if you should confer with a support technician at a later time.

**NOTE**

To enable or disable wireless communication, use the Fn + F8 key. For more information see [“TOSHIBA Function Keys” on page 147](#).

- ❖ Use IPCONFIG to verify that the computer has a useful IP address - one other than the private address of 169.254.xxx.xxx assigned by Windows®.
  - 1 From the Start screen, type Cmd.
  - 2 Click **Command Prompt**.
  - 3 Enter IPCONFIG/ALL, and then press ENTER.The IP address for each active network adapter will be displayed.
- ❖ Connect your computer directly to your router or broadband modem, by plugging a standard CAT5 Ethernet patch cable (sold separately) into your computer's RJ45 Ethernet port. If your connection problem disappears, the problem lies in the Wi-Fi® part of your network.
- ❖ If you have enabled any security provisions (closed system, MAC address filtering, Wired Equivalent Privacy [WEP], etc.), check the access point vendor's Web site for recent firmware upgrades. Problems with WEP keys, in particular, are frequently addressed in new firmware releases.

## Develop good computing habits

### Save your work frequently.

You can never predict when your computer will lock, forcing you to close a program and lose unsaved changes. Many software programs build in an automatic backup, but you should not rely solely on this feature. Save your work! See [“Computing tips” on page 68](#) for instructions.

### On a regular basis, back up the information stored on your internal storage drive.

Use Windows® to back up files, or the entire computer, to an optical disc, or external hard disk. Here are some ways you can do this:

- ❖ Use the Windows® operating system to back up files or your entire computer to an optical disc, or external hard disk.
- ❖ Copy files to a rewritable external storage device.
- ❖ Connect your computer to the office network and copy files to your network partition.

Some people use a combination of these methods, backing up all files weekly and copying critical files to external media on a daily basis.

If you have installed your own programs, you should back up these programs as well as your data files. If something goes wrong that requires you to reformat your internal storage drive and start again, reloading all your programs and data files from a backup source will save time.

### **Read the documentation.**

It is very difficult to provide a fail-safe set of steps you can follow every time you experience a problem with the computer. Your ability to solve problems will improve as you learn about how the computer and its software work together.

Get familiar with all of the documentation provided with your computer, as well as the information that may come with the programs and devices you purchase.

Your local computer store or book store sells a variety of self-help books you can use to supplement the information in the manuals.

## **Data and system configuration backup in the Windows® operating system**

The Windows® operating system offers some easy-to-use features for backing up your Windows® settings and your data - documents and other important files. Take advantage of these features to protect yourself from much more difficult and time-consuming restoration procedures, and to safeguard your valuable data from loss.

### **Saving system configuration with restore points**

The System Restore feature of the Windows® operating system quickly creates restore points - 'snapshots' of your Windows® operating system configuration - and saves them for later recall. If you experience problems after installing some new hardware or software, you can easily select a previously established Control Point to 'turn back the clock,' restoring the Windows® operating system to the state it was in just prior to the installation. This is much easier and more effective than uninstalling the hardware or software, which often leaves behind unwanted files and settings. It is also easy to undo a restore point selection, if you change your mind.

Follow these steps to create a restore point using the System Restore utility:

- 1 From the Start screen, type **Control**. Click or touch **Control Panel** from the list that appears.
- 2 Click or touch **System and Security**, and then **System**.
- 3 In the left pane, click or touch **System Protection**.  
The System Protection tab of the System Properties window appears.
- 4 Click or touch **Configure**.
- 5 Under **Restore settings** select **Turn on System Protection**.
- 6 Click or touch **OK**.
- 7 Click or touch **Create**.
- 8 In the input field, enter a name that is descriptive enough to be easily understood in the future, such as “Before installing Brand X Accounting app.” Then click or touch **Create**.

The Windows® operating system creates the restore point, automatically stamps it with the current date and time, and displays a message that the restore point was successfully created.

- 9 Click or touch **Close**.

Then, at a later time, you can re-establish your Windows® configuration using the saved restore point. To do this:

- 1 From the Start screen, type **Control**. Click or touch **Control Panel** from the list that appears.
- 2 Click or touch **System and Security**, and then **System**.
- 3 In the left pane, click or touch **System Protection**.  
The System Protection tab of the System Properties window appears.
- 4 Click or touch **System Restore...**
- 5 Click or touch **Next**.

- 
- 6 Click or touch the Restore point you want to use then click or touch **Next**.

The time stamp and description of each Restore point is displayed.

---

**NOTE** At this point you can click or touch “Scan for affected programs” to determine what the impact of using the chosen Restore Point will be.

---

- 7 Verify that the Restore point you chose is the correct one. If it is not, click or touch **Back** to return to the previous step.
- 8 Close all programs and save all open files.
- 9 Click or touch **Finish**, and then **Yes** to begin the system restore.

Your Windows® operating system configuration will now be restored to the state it was in when the chosen restore point was created, and then the computer will be automatically restarted.

## Backing up your data or your entire computer with the Windows® operating system

The most valuable component of your computer system is the data you create and store on its internal storage drive. Since problems with either hardware or software can make the data inaccessible or even destroy it, the next most valuable component of your computer system may be a recent backup of your data.

Fortunately, the Windows® operating system offers a convenient way to back up your computer or just your important files to optional external writable optical disc drives, or hard drives. An external hard drive is recommended in case the internal storage drive fails. No additional software is required. Most of the optical disc drives built into recent Toshiba portable computer models can write to (or ‘burn’) as well as read from optical discs. External optical disc writers are also widely available.

Follow these steps to back up your computer or files to optical discs, or a storage drive:

---

**NOTE** You cannot back up the computer while running on battery power. Connect the AC adaptor before continuing.

---

- 1 From the Start screen, type **Control**. Click or touch **Control Panel** from the list that appears.
- 2 Click or touch **Save backup copies of your files with File History** under the **System and Security** heading. Follow the on-screen instructions to back up your files.

For additional Help, while in the Windows® Desktop screen, press the F1 key to launch the Windows® Help and Support screen. Search for “back up files”.

### General tips for installing hardware and software

Here are a few tips to help ensure safe and easy installation of new hardware (printers, pointing devices, external hard drives, optional external writable optical disc drive writers, scanners, etc.) and software (applications like Microsoft® Office and Adobe® Photoshop®, or utility software such as special toolbars for your web browser).

- ❖ Create a restore point (refer to [“Saving system configuration with restore points” on page 139](#)). Before installing anything, use the System Restore utility to set a restore point (see the section titled restore points). If anything goes wrong, you will then be able to easily restore the Windows® operating system to the state it was in prior to the installation, undoing any changes that the installation process introduced.
- ❖ Back up your critical data (see [“Backing up your data or your entire computer with the Windows® operating system” on page 141](#)).
- ❖ Have your back up DVD(s) on hand in case you need any files from them.

- ❖ Do not guess - follow directions carefully! It is often necessary to run an installation utility first - before connecting a new hardware item to the computer. If the device is connected first, it may be very difficult to complete the installation successfully. Always carefully follow the installation instructions that accompany the hardware or software.
- ❖ Restart the Windows® operating system. Always restart the Windows® operating system after each installation, even if the installation utility does not prompt you to do so. This will ensure that the installation is completed, and will clean up anything that the installation utility left behind.
- ❖ Do one installation at a time. If you have several new items to add to your computer system, install just one at a time, creating restore points immediately before each successive installation. This will make it much easier to determine the origin of any new problems. For best results, follow this sequence:
  - 1 Back up critical data.
  - 2 Create a restore point.
  - 3 Install one item of hardware or software.
  - 4 Restart the Windows® operating system.
  - 5 Use the new hardware or software for a while, noting any new problems. Make sure that your critical applications (email, business applications, etc.) are working correctly, and verify that important devices are still functioning.
  - 6 For each additional hardware or software item, repeat these steps, starting at step 1 if any of your critical data has changed, or starting at step 2 if no critical data has changed.

## **USB Sleep and Charge is not working.**

USB Sleep and Charge may be disabled. Open the TOSHIBA Sleep and Charge utility to check if the feature is disabled and to enable it if necessary.

- ❖ Make sure that the device you want to charge is connected to a port that supports the USB Sleep and Charge function. Ports that support this feature are identified with the (⚡) icon.

- ❖ USB Sleep and Charge may be disabled. Open the TOSHIBA Sleep and Charge utility to check if the feature is disabled and to enable it if necessary. For more information, see [“Enabling/Disabling USB Sleep and Charge” on page 113](#).
- ❖ Try selecting a different charging mode in the TOSHIBA Sleep and Charge utility, if your computer provides more than one charging mode. For more information, see [“Power supply mode settings” on page 113](#).
- ❖ If you are attempting to charge a device without an AC adaptor connected to the computer, the computer's battery power may be below the limit specified in the TOSHIBA Sleep utility or the battery may be depleted. Lower the limit in Sleep and Charge to enable charging at the current battery power level, or, if battery power is running low or is depleted, connect the AC adaptor to your computer.
- ❖ The USB Sleep and Charge function may not work with certain external devices even if they are compliant with the USB specification. In those cases, power on the computer to charge the device or use a different charging device.

#### **The “USB Wakeup function” does not work.**

- ❖ When the “USB Sleep and Charge function” is set to Enabled the “USB Wakeup function” does not work for ports that support the “USB Sleep and Charge function.” In that case, use a USB port that does not have the “USB Sleep and Charge function”-compatible icon (⚡), if you have a non-Sleep and Charge USB port available or disable the “USB Sleep and Charge function.” For more information, see [“Sleep Utilities” on page 111](#).

## **If you need further assistance**

If you have followed the recommendations in this chapter and are still having problems, you may need additional technical assistance.

Since some problems may be related to the operating system or the program you are using, it is important to investigate all sources.

- ❖ Review the troubleshooting information in your operating system documentation.

- ❖ If the problem occurs while you are running a program, consult the program's documentation for troubleshooting suggestions. Contact the software company's technical support group for their assistance.
- ❖ Consult the dealer from whom you purchased your computer and/or program. Your dealer is your best source for current information.

## Terms

The following terms may appear in this User's Guide.

### A

**active-matrix display**—A liquid crystal display (LCD) made from an array of liquid crystal cells using active-matrix technology. Also known as a “TFT display,” in its simplest form there is one thin film transistor (TFT) for each cell. This type of display works well with computers because of its shallow depth and high-quality color. Active-matrix displays are viewable from wider angles than most passive-matrix displays.

**adapter**—A device that provides a compatible connection between two units. For example, the computer's internal display adapter receives information from the software and translates it into images on the screen. An adapter can take a number of forms, from a microprocessor to a simple connector. An intelligent adapter (one that is capable of doing some processing) may also be called a controller.

**Alternating Current (AC)**—The type of power usually supplied to residential and commercial wall outlets. AC reverses its direction at regular intervals. Compare *Direct Current (DC)*.

**application**—A computer program that you use to perform tasks of a specific type. Applications include word processors, spreadsheets, and database management systems. See also *program*.

**B** **backup**—A copy of a file, usually on a removable disk, kept in case the original file is lost or damaged.

**Basic Input/Output System (BIOS)**—See *BIOS*.

**baud rate**—The speed at which a communication device, such as a printer or modem, transmits information. Baud rate is the number of signal changes per second (not necessarily the same as bits per second). See also *bits per second*.

**Blu-ray Disc (BD)**—Offering more storage capacity than DVDs, the format was developed to allow for more data storage and to enable recording and playback of high-definition video (HD).

**BIOS (Basic Input/Output System)**—Basic instructions, stored in read-only memory (ROM), containing the information the computer needs to check hardware and load the operating system when you start up the computer.

**bits per second (bps)**—A way of measuring the speed at which information is passed between two devices. This is the basic unit of measure used in modem communications, and is similar, but not identical, to the baud rate. See also *baud rate*.

**boot**—To start the computer. The term “boot” originates from bootstrap program (as in “pulling itself up by its bootstraps”), a program that loads and initializes the operating system. See also *reboot*.

**boot disk**—See *system disk*.

**boot priority (startup sequence)**—The order in which the computer accesses its internal storage drives to locate the startup files. Under the default startup sequence, the computer looks for the startup files in the external media before checking the internal storage drive.

**bus**—An electrical circuit that connects the central processing unit (CPU) with other parts of the computer, such as the video adapter, disk drives, and ports. It is the pathway through which data flows from one device to another. See also *bus speed*, *frontside bus*.

**bus speed**—The speed at which the central processing unit (CPU) communicates with the other parts of the computer.

- C** **cache**—A section of very fast memory in which frequently used information is duplicated for quick access. Accessing data from cache is faster than accessing it from the computer's main memory. See also *CPU cache*, *L1 cache*, *L2 cache*.
- CD**—An individual compact disc. See also *CD-ROM*.
- CD-ROM (Compact Disc Read-Only Memory)**—A form of high-capacity storage that uses laser optics instead of magnetic means for reading data. See also *CD*. Compare *DVD-ROM*.
- Central Processing Unit (CPU)**—The chip that functions as the “brain” of the computer. It takes information from outside sources, such as memory or keyboard input, processes the information, and sends the results to another device that uses the information.
- character**—Any letter, number, or symbol you can use on the computer. Some characters are non-printing characters, such as a paragraph break in a word-processing program. A character occupies one byte of computer storage.
- Charm/charms**—Start screen icons that slide out from the right side of the screen and direct you to various Windows® functions.
- chip**—A small piece of silicon containing computer logic and circuits for processing, memory, input/output, and/or control functions. Chips are mounted on printed circuit boards.
- click**—To press and release the pointing device's primary button without moving the pointing device. In the Windows® operating system, this refers to the pointing device's left button, unless otherwise stated. See also *double-click*.
- color palette**—A set of specified colors that establishes the colors that can be displayed on the screen at a particular time.
- compatibility**—The extent to which computers, programs, or devices can work together harmoniously, using the same commands, formats, or language as another.
- configuration**—(1) The collection of components that make up a single computer system. (2) How parts of the system are set up (that is, configured).

**controller**—A device that controls the transfer of data from a computer to a peripheral device and vice versa. For example, disk drives, monitors, keyboards, and printers all require controllers.

**CPU**—See *Central Processing Unit (CPU)*.

**CPU cache**—A section of very fast memory residing between the CPU and the computer's main memory that temporarily stores data and instructions the CPU will need to execute commands and programs. See also *cache*, *L1 cache*, *L2 cache*.

**cursor**—An on-screen symbol (usually a flashing vertical line) that indicates the position where characters will appear when you enter data.

## D

**Desktop**—Offers the traditional look and feel of the Windows® desktop found in Windows® 7 and earlier releases of the Windows® operating system.

**default**—The setting selected by a program when the user does not specify an alternative setting.

**device**—A component attached to the computer. Devices may be external (outside the computer's case) or internal (inside the computer's case). Printers, disk drives, and modems are examples of devices.
