

The LEGO® Company takes great care to design and manufacture all products to the most exacting specifications. We use only the highest quality materials and each design is thoroughly tested for safety and good play value. Our products meet the required European and International standards and indeed exceed many of them.

We can't, however, guarantee absolute durability of our products or parts. It is possible that signs of wear will appear; particularly as a result of regular and intensive use. Factors such as extremes of temperature or humidity; or strong direct sunlight can lead to premature wear, as can contact with cleaning materials or some cosmetics.

We advise against exposing LEGO products and parts to halogen lamps, spot lights, hair dryers, any ovens, electric hob rings or plates, fires, radiators, heaters or toasters, etc. LEGO products and parts can't withstand exposure to these and therefore we aren't able to offer a lifetime guarantee.
